B.Sc- Information Technology Syllabus under CBCS Pattern with effect from 2023-2024 onwards

PERIYAR UNIVERSITY

PERIYAR PALKALAI NAGAR SALEM-636011

DEGREE OF BACHELOR OF SCIENCE

Syllabus for

B.Sc., INFORMATION TECHNOLOGY

(SEMESTER PATTERN- CBCS)

(For Candidates admitted in the colleges affiliated to

Periyar university from 2023-2024 onwards)

1. Introduction

B.Sc. Information Technology

Education is the key to development of any society. Role of higher education is crucial for securing right kind of employment and also to pursue further studies in best available world class institutes elsewhere within and outside India. Quality education in general and higher education in particular deserves high priority to enable the young and future generation of students to acquire skill, training and knowledge in order to enhance their thinking, creativity, comprehension and application abilities and prepare them to compete, succeed and excel globally. Learning Outcomesbased Curriculum Framework (LOCF) which makes it student-centric, interactive and outcomeoriented with well-defined aims, objectives and goals to achieve. LOCF also aims at ensuring uniform education standard and content delivery across the state which will help the students to ensure similar quality of education irrespective of the institute and location.

Computer Science is the study of quantity, structure, space and change, focusing on problem solving, application development with wider scope of application in science, engineering, technology, social sciences etc. throughout the world in last couple of decades and it has carved out a space for itself like any other disciplines of basic science and engineering. Computer science is a discipline that spans theory and practice and it requires thinking both in abstract terms and in concrete terms. Nowadays, practically everyone is a computer user, and many people are even computer programmers. Computer Science can be seen on a higher level, as a science of problem solving and problem solving requires precision, creativity, and careful reasoning. The ever-evolving discipline of computer science also has strong connections to other disciplines. Many problems in science, engineering, health care, business, and other areas can be solved effectively with computers, but finding a solution requires both computer science expertise and knowledge of the particular application domain. Computer science has a wide range of specialties. These include Computer Architecture, Software Systems, Graphics, Artificial Intelligence, Computational Science, and Software Engineering. Drawing from a common core of computer science knowledge, each specialty area focuses on specific challenges. Computer Science is practiced by mathematicians, scientists and engineers. Mathematics, the origins of Computer Science, provides reason and logic. Science provides the methodology for learning and refinement. Engineering provides the techniques for building hardware and software.

The Students completing this programme will be able to present Software application clearly and precisely, make abstract ideas precise by formulating them in the Computer languages. Completion of this programme will also enable the learners to join teaching profession, enhance their employability for government jobs, jobs in software industry, banking, insurance and investment sectors, data analyst jobs and jobs in various other public and private enterprises.

	TCOMES-BASED CURRICULUM FRAMEWORK GUIDELINES BASED EGULATIONS FOR UNDER GRADUATE PROGRAMME
Programme:	B.Sc., Information Technology
Programme Code:	
Duration:	3 years [UG]
Programme Outcomes:	 PO1: Disciplinary knowledge: Capable of demonstrating comprehensive knowledge and understanding of one or more disciplines that form a part of an undergraduate Programme of study PO2: Communication Skills: Ability to express thoughts and ideas effectively in writing and orally; Communicate with others using appropriate media; confidently share one's views and express herself/himself; demonstrate the ability to listen carefully, read and write analytically, and present complex information in a clear and concise manner to different groups. PO3: Critical thinking: Capability to apply analytic thought to a body of knowledge; analyse and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence; identify relevant assumptions or implications; formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development. PO4: Problem solving: Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems, rather than replicate curriculum content knowledge; and apply one's learning to real life situations. PO5: Analytical reasoning: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyze and synthesize data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints. PO6: Research-related skills: A sense of inquiry and capability for asking relevant/appropriate questions, problem arising, synthesising and articulating; Ability to recognise cause-and-effect relationships, define problems, formulate hypotheses, test hypotheses, predict cause-and-effect relationships; ability to plan, execute and report the results of an experiment or investigation

	with diverse teams; facilitate cooperative or coordinated effort on the part of a group, and act together as a group or a team in the interests of a common cause and work efficiently as a member of a team
	PO8: Scientific reasoning : Ability to analyse, interpret and draw conclusions from quantitative/qualitative data; and critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.
	PO9: Reflective thinking : Critical sensibility to lived experiences, with self awareness and reflexivity of both self and society.
	PO10 Information/digital literacy: Capability to use ICT in a variety of learning situations, demonstrate ability to access, evaluate, and use a variety of relevant information sources; and use appropriate software for analysis of data.
	PO 11 Self-directed learning : Ability to work independently, identify appropriate resources required for a project, and manage a project through to completion.
	PO 12 Multicultural competence: Possess knowledge of the values and beliefs of multiple cultures and a global perspective; and capability to effectively engage in a multicultural society and interact respectfully with diverse groups.
	PO 13: Moral and ethical awareness/reasoning : Ability to embrace moral/ethical values in conducting one's life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Capable of demon starting the ability to identify ethical issues related to one's work, avoid unethical behaviour such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights; appreciating environmental and sustainability issues; and adopting objective, unbiased and truthful actions in all aspects of work.
	PO 14: Leadership readiness/qualities: Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination, in a smooth and efficient way.
	PO 15: Lifelong learning: Ability to acquire knowledge and skills, including "learning how to learn", that are necessary for participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives, and adapting to changing trades and demands of work place through knowledge/skill development/reskilling.
Programme Specific Outcomes:	 PSO1: To enable students to apply basic microeconomic, macroeconomic and monetary concepts and theories in real life and decision making. PSO 2: To sensitize students to various economic issues related to Development, Growth, International Economics, Sustainable Development and Environment.

PSO 3 : To familiarize students to the concepts and theories related to Finance,
Investments and Modern Marketing.
PSO 4 : Evaluate various social and economic problems in the society and
develop answer to the problems as global citizens.
PSO 5: Enhance skills of analytical and critical thinking to analyze
effectiveness of economic policies.

	PO 1	PO2	PO3	PO4	PO5	PO6	PO7	PO8
PSO 1	Y	Y	Y	Y	Y	Y	Y	Y
PSO 2	Y	Y	Y	Y	Y	Y	Y	Y
PSO3	Y	Y	Y	Y	Y	Y	Y	Y
PSO 4	Y	Y	Y	Y	Y	Y	Y	Y
PSO 5	Y	Y	Y	Y	Y	Y	Y	Y

3 – Strong, 2- Medium, 1- Low

Highlights of the Revamped Curriculum:

- Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, devising mathematical models and algorithms for providing solutions to industry / real life situations. The curriculum also facilitates peer learning with advanced mathematical topics in the final semester, catering to the needs of stakeholders with research aptitude.
- The General Studies and Mathematics based problem solving skills are included as mandatory components in the _Training for Competitive Examinations' course at the final semester, a first of its kind.
- The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.

- The Industrial Statistics course is newly introduced in the fourth semester, to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.
- The Internship during the second year vacation will help the students gain valuable work experience, that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge to practical situations. The state of art technologies in conducting a Explain in a scientific and systematic way and arriving at a precise solution is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.
- State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest - Artificial Intelligence.

Value additions in the Revamped Curriculum:

Semester	Newly introduced Components	Outcome / Benefits
I	Foundation Course To ease the transition of learning from higher secondary to higher education, providing an overview of the pedagogy of learning Literature and analysing the world through the literary lens gives rise to a new perspective.	 Instill confidenceamong students Create interest for thesubject
I, II, III, IV	Skill Enhancement papers (Discipline centric / Generic / Entrepreneurial)	 Industry readygraduates Skilled human resource Students are equippedwith essential skills to make them employable Training on language and communication skills enable the students gain knowledge and exposure in the competitive world. Discipline centric skill will improve the Technical knowhow of solving real life problems.
III, IV, V & VI	Elective papers	 Strengthening thedomain knowledge Introducing thestakeholders to theState-of Art techniquesfrom thestreams ofmulti-disciplinary, cross disciplinary and inter disciplinary nature Emerging topics inhigher education/industry/ communication network / health sectoretc. are introduced with hands-on-training.

IV	Elective Papers	 Exposure to industry moulds students into solution providers Generates Industryready graduates Employment opportunities enhanced 					
V Semester	Elective papers	 Self-learning isenhanced Application of the concept to real situationis conceived resulting in tangible outcome 					
VI Semester	Elective papers	 Enriches the studybeyond the course. Developing a researchframework and presenting their independent and intellectual ideas effectively. 					
Extra Cre For Adva	dits: nced Learners / Honors degree	 To cater to the needs ofpeer learners / research aspirants 					
Skills acqu	uired from the Courses	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill

TOTAL						
CO	Course Outcomes					
	Understand the significance of control statements, loops and functions in creating					
CO1	Simple programs.					
CO2	Interpret the core data structures available in python to store, process and sort the data.					
CO3	Develop the real time applications using python programming language.					
CO4	Analyze the real time problem using suitable python concepts.					
CO5	Assess the complex problems using appropriate concepts in python.

CORE – XI: OPERATING SYSTEMS

Subject	t	L	LT	Р	S	Credits	Inst.			
Code		L		ſ	3	Creatis	Hours	CIA	External	Total
		5	0	0	V	4	5	25	75	100
Learning Objectives										
LO1			The objective of this course is to provide an introduction to the internal operation of modern operating systems							
LO2	LO2To focus on the core concepts such as processes and threads, mutual exclusion, CPU scheduling, deadlock, memory management, and file systems.									

	Prerequisites:	
Unit	Contents	No. of Hours
I	Introduction: Definition of Operating System - OS Structures: OS Services - System Calls - Virtual Machines - Process Management: Process Concept - Process Scheduling - Operation on Processes - Co-operating Processes - Inter-process Communication	15
П	CPU Scheduling: Basic Concepts - Scheduling Criteria - Scheduling Algorithms - Process Synchronization: The Critical Section Problem - Semaphores - Classical Problems of Synchronization - Critical Regions	15
Ш	Deadlocks: System Model - Deadlock characterization – Methodsfor Handling Deadlocks Deadlock Prevention - Deadlockavoidance- Deadlock Detection - Recovery from Deadlock.	15
IV	Storage management: Memory management - Swapping –Contiguous Memory allocation. Paging – Segmentation –Segmentation with Paging –Virtual memory: Demand paging -Page replacement – Thrashing. Mass-Storage Structure: DiskStructure- Disk scheduling.	15
V	File-SystemInterface:FileConcept-FileAttributes-FileOperations – AccessMethods:Sequential Access – Direct Access–DirectoryStructure:Single-LevelDirectory-Directory-Tree-StructuredDirectories-IntroducingShellProgramming –LinuxGeneralPurposeCommands-ProcessOrientedCommands – CommunicationOriented Commands	15
	TOTAL	75
CO	Course Outcomes	I
CO1	Outline the fundamental concepts of an OS and their respective func	tionality
CO2	Illustrate the importance of open source operating system commands	5
CO3	Identify and stimulate management activities of operating system	
CO4	Analyze the various services provided by the operating system.	
CO5	Interpret different problems related to Process, Scheduling, Deadloo and Files	ck, memory

List of Exercises

Do the following 8 exercises for any project projects (Eg. Student Portal, Online exam registration)

1) Development of problem statement.

2) Preparation of Software Requirement Specification Document.

3)Preparation of Software Configuration Management and Risk Management related documents.

4) Draw the entity relationship diagram

5) Draw the data flow diagrams at level 0 and level 1

6) Draw use case diagram

7) Draw activity diagram of all use cases.

8) Performing the Design by using any Design phase CASE tools.

9) Develop test cases for unit testing and integration testing

10) Develop test cases for various white box and black box testing techniques

BIG DATA ANALYTICS

Subject	Category	L	Т	Р	S	Credits	Inst.	Marks		
Code							Hours	CIA	External	Total
	Core	4	-	-	-	3	5	25	75	100
			Co	urse	Obj	ective	I	I.	L	
C1	Understand the Big Data Platform and its Use cases, Map Reduce Jobs									
C2	To identify and understand the basics of cluster and decision tree									
C3	To study about the Association Rules, Recommendation System									
C4	To learn about the concept of stream									
C5	Understand the concepts of NoSQL Databases									

UNIT	Details					
Ι	 Evolution of Big data — Best Practices for Big data Analytics — Big data characteristics — Validating — The Promotion of the Value of Big Data — Big Data Use Cases- Characteristics of Big Data Applications — Perception and Quantification of Value -Understanding Big Data Storage — A General Overview of High-Performance Architecture — HDFS — MapReduce and YARN — Map Reduce Programming Model 					
II	Advanced Analytical Theory and Methods: Overview of Clustering — K- means — Use Cases — Overview of the Method — Determining the Number of Clusters — Diagnostics — Reasons to Choose and Cautions Classification: Decision Trees — Overview of a Decision Tree — The General Algorithm — Decision Tree Algorithms — Evaluating a Decision Tree — Decision Trees in R — Naïve Bayes — Bayes? Theorem — Naïve Bayes Classifier.					
III	Advanced Analytical Theory and Methods: Association Rules —Overview — Apriori Algorithm — Evaluation of Candidate Rules —Applications of Association Rules — Finding Association& findingsimilarity — Recommendation System: Collaborative Recommendation-Content Based Recommendation — Knowledge Based Recommendation-Hybrid Recommendation Approaches.					
IV	Introduction to Streams Concepts — Stream Data Model and Architecture — Stream Sampling Data in a Stream — Filtering Streams — Counting Distinct Elements in a Stream — Estimating moments — Counting oneness in a Window — Decaying Window — Real time Analytics Platform(RTAP) applications — Case Studies — Real Time Sentiment Analysis, Stock Market Predictions. Using Graph Analytics for Big Data: Graph Analytics					
V	NoSQL Databases : Schema-less Models?: Increasing Flexibility for DataManipulation-Key Value Stores- Document Stores — Tabular Stores —Object Data Stores — Graph Databases Hive — Sharding —Hbase —Analyzing big data with twitter — Big data for E-Commerce Big data forblogs — Review of Basic Data Analytic Methods using R.

C5	To study about the Genetic Algorithm.		
UNIT	Details	No. of	Course Objective
Ι	Introduction to AI : Problem formulation – AI	Hours	
1	Applications – Problems – State Space and Search –		
	Production Systems – Breadth First and Depth First –		
	Travelling Salesman Problem – Heuristic search	12	C1
	techniques: Generate and Test – Types of Hill		
	Climbing.		
	Chinolity.		
II	Fuzzy Logic Systems:		
	Notion of fuzziness – Operations on fuzzy sets – T-		
	norms and other aggregation operators - Basics of		
	Approximate Reasoning - Compositional Rule of	12	C2
	Inference – Fuzzy Rule Based Systems – Schemes		
	of Fuzzification – Inferencing – Defuzzification –		
	Fuzzy Clustering – fuzzy rule-based classifier.		
III	Neural Networks: What is Neural Network, Learning		
	rules and various activation functions, Single layer		
	Perceptions, Back Propagation networks, Architecture		
	of Backpropagation (BP) Networks, Back propagation	12	C3
	Learning, Variation of Standard Back propagation		
	Neural Network, Introduction to Associative Memory,		
	Adaptive Resonance theory and Self Organizing Map,		
	Recent Applications		
IV	Artificial Neural Networks: Fundamental Concepts		
	– Basic Models of Artificial Neural Networks –	12	C4
	Important Terminologies of ANNs – McCulloch-Pitts		
. .	Neuron – Linear Separability – Hebb Network.		
V	Genetic Algorithm: Introduction – Biological		
	Background – Genetic Algorithm Vs Traditional	1.5	~-
	Algorithm – Basic Terminologies in Genetic	12	C5
	Algorithm – Simple GA – General Genetic		
	Algorithm – Operators in Genetic Algorithm	~~	
	Total	60	

Course Outcomes Programme Outcomes										
CO	On completion of this course, students will									
1	Describe the fundamentals of artificial intelligence	PO1								
	concepts and searching techniques.	FOI								
2	Develop the fuzzy logic sets and membership	PO1, PO2								
	function and defuzzification techniques.	101,102								
3	Understand the concepts of Neural Network and	PO4, PO6								
	analyze and apply the learning techniques	104,100								
4	Understand the artificial neural networks and its	PO4, PO5, PO6								
	applications.	104,105,100								
5	Understand the concept of Genetic Algorithm and	PO3, PO8								
	Analyze the optimization problems using GAs.	105,108

	Trends in Computing Elective - Y - 3 4 25 75 100											
	Course Objective											
C1	Learning current trends in various computer science and information technology fields.											
C2	Learning various fields of Cloud computing, Green computing ,the Edge and Fog computing technology.											
C3	To learn about Architecture	To learn about Architecture and Application design of Cloud, Edge & fog computing.										
C4	To know computing and to	To know computing and to improve security services of computing technologies.										
C5	To learn the various Case St	tudies in Clo	oud, I	Edge	e & f	og C	omp	uting	g.			
UNIT		Detail	5							N	o. of	

		Hours				
Ι	Era of Cloud Computing : Introduction – Components of Cloud Computing – Cloud Types: Private, Public and Hybrid clouds – Limitations of the Cloud - Virtualization : Structure and Mechanisms.	12				
Π	Cloud computing Services: Software as a Service(SaaS) – Platform as a Service(PaaS)- Infrastructure as a Service(IaaS)-Database as a Service (DBaaS)- Recent Trends in cloud computing and Standards-Data Security in Cloud – Risks and Challenges with Cloud Data- Security as a Service.	12				
III	Edge Computing: Edge Computing and Its Essentials: Introduction- Edge Computing Architecture- Advantages and Limitations of Edge Computing Systems- Edge Computing Interfaces and Devices - Edge Analytics: Edge Data Analytics – Potential of Edge Analytics – Architecture of Edge Analytics – Case study	12				
IV	IVEdge Data storage Security: Edge-Based Attack Detection and Prevention-Edge Computing Use Cases and Case Studies: Edge Computing High- Potential Use Cases.Introduction to green computing–Calculating carbon footprint- Choosing Green PC path: A green make over – Buying green computer- Choosing Earth Friendly peripherals					
V	Fog Computing: Introduction to Fog computing – Architecture - Characteristics - Fog Computing Services – Fog Resource Estimation and Its Challenges-Fog computing on 5G networks – Fog computing Use cases and Case studies.	12				
	Total	60				
	Course Outcomes	Program me Outcome				
CO	On completion of this course, students will					
1	Outline the concepts, applications, benefits and limitations of various computing paradigms.	PO1				
2	Classify the computing technologies based on its architecture and infrastructure and identify its strategies.	PO1, PO2				
3	Examine various cloud services, Security threat exposure within a cloudcomputing infrastructure.	PO4, PO6				
4	Asses the problems and solutions involved in various stages of different	PO4,				

	computing environments.	PO5, PO6									
5	Discuss the importance of cloud, edge and Fog technology and implement innovative ideas and practices for regulating green IT.

Ι	 Introduction:Modernizing Project Management: Project Management Needed a Makeover – Introducing Agile Project Management. Applying the Agile Manifesto and Principles: Understanding the Agile manifesto – Outlining the four values of the Agile manifesto – Defining the 15 Agile Principles – Adding the Platinum Principles – Changes as a result of Agile Values – The Agile litmus test. Why Being Agile Works Better: Evaluating Agile benefits – How Agile approaches beat historical approaches – Why people like being Agile. 	12
Π	Being AgileAgile Approaches: Diving under the umbrella of Agile approaches –Reviewing the Big Three: Lean, Scrum, Extreme Programming -SummaryAgile Environments in Action: Creating the physical environment –Low-tech communicating – High-tech communicating – Choosing tools.Agile Behaviours in Action: Establishing Agile roles – Establishingnew values – Changing team philosophy.	12
III	 Agile Planning and Execution Defining the Product Vision and Roadmap: Agile planning – Defining the product vision – Creating a product roadmap – Completing the product backlog. Planning Releases and Sprints: Refining requirements and estimates – Release planning – Sprint planning. Working Throughout the Day: Planning your day – Tracking progress – Agile roles in the sprint – Creating shippable functionality – The end of the day. Showcasing Work, Inspecting and Adapting: The sprint review – The sprint retrospective. Preparing for Release: Preparing the product for deployment (the release sprint) – Preparing the operational support – Preparing the organization for product deployment - Preparing the marketplace for product deployment 	12
IV	Agile Management	12

Managing Scope and Procurement: What's different about Agile scope management – Managing Agile scope – What's different about Agile procurement – Managing Agile scope – What's different about Agile procurement – Managing Agile scope – What's different about Agile procurement – Managing Agile scope – What's different about Agile cost management – Managing Agile budgets. Managing Team Dynamics and Communication: What's different about Agile communication – Managing Agile communication. Managing Quality and Risk: What's different about Agile quality – Managing Agile quality – What's different about Agile quality – Managing Agile quality – What's different about Agile quality – Managing Agile quality – What's different about Agile quality – Managing Agile quality – What's different about Agile quality – Managing Agile quality – What's different about Agile communication. Managing Agile quality – What's different about Agile quality – Managing Agile sisk. V Implementing Agile Being a Change Agent: Becoming Agile requires change – why change deesn't happen on its own – Platium Edge's Change Roadmap – Avoiding pitfalls – Signs your changes are slipping. Benefits, Factors for Success and Metrics: Ten key benefits of Agile project management – Ten key factors for project success – Ten metrics for Agile Organizations. PO1	r									
management – Managing Agile schedules – What's different about Agile cost management – Managing Agile budgets. Managing Team Dynamics and Communication: What's different about Agile team dynamics – Managing Agile team dynamics – What's different about Agile communication. Managing Quality and Risk: What's different about Agile quality – Managing Quality and Risk: What's different about Agile quality – Managing Agile quality – What's different about Agile quality – Managing Agile risk. Managing Quality and Risk: What's different about Agile quality – Managing Agile risk. V Implementing Agile Building a Foundation: Organizational and individual commitment – Choosing the right pilot team members – Creating and environment that enables Agility – Support Agility initially and over time. 12 Being a Change Agent: Becoming Agile requires change – why change doesn't happen on its own – Platinum Edge's Change Roadmap – Avoiding piffalts – Signs your changes are slipping. 12 Benefits, Factors for Success and Metrics: Ten key benefits of Agile project management – Ten key factors for project success – Ten metrics for Agile Organizations. 60 CO On completion of this course, students will PO1 1 Understanding of Agile development and testing technologies and APIs using Agile Management. PO1, PO2 3 Understanding of Agile Management Design, scope , Procurement, managing Time and Cost and Quality Check. PO4, PO5, PO6 5 Analysing of Agile development and testing techniques. C1	To study fundamental cor	cepts in softw	vare	testin	ıg						
C2	To discuss various softwa integration and system tes	-	ues ai	nd so	lutio	ons in	softw	are un	it test,		
C3	3 To study the basic concept of Data flow testing and Domain testing.										
C4	To Acquire knowledge or	n path product	ts and	l path	n exp	pressio	ons.				

C5	To learn about Logic based testing and decision tables					
UNIT	Details	No. of Hours	Course Objective			
Ι	Introduction: Purpose–Productivity and Quality in Software–TestingVsDebugging–Model for Testing– Bugs–Types of Bugs – Testing and Design Style.	6	C1			
II	Flow / Graphs and Path Testing – Achievable paths – Path instrumentation Application Transaction FlowTesting Techniques.	6	C2			
III	Data Flow Testing Strategies - Domain Testing:Domains and Paths – Domains and Interface Testing.	6	C3			
IV	Linguistic –Metrics – Structural Metric – Path Products and Path Expressions.SyntaxTesting– Formats–Test Cases	6	C4			
V	Logic Based Testing–Decision Tables– Transition Testing–States, State Graph, StateTesting.	6	C5			
	Total	30				
	Course Outcomes	Program O	utcomes			
СО	On completion of this course, students will	0				
1	Students learn to apply software testing knowledge and engineering methods	PO1				
2	Have an ability to identify the needs of software test automation, and define and develop a test tool to support test automation.	PO1, P	02			
3	Have an ability understand and identify various software testing problems, and solve these problems by designing and selecting software test models, criteria, strategies, and methods.	PO4, P	O6			
4	Have basic understanding and knowledge of contemporary issues in software testing, such as component-based software testing problems	PO4, PO5, PO6				
5	Have an ability to use software testing methods and modern software testing tools for their testing projects.	PO3, PO8

UNIT	Details								N	No. of Hours		
Ι	INTRODUCTION : Concept Nature, Scope and Role of OF	-								6		

	Opportunities for OB (Globalization, Indian workforce diversity, customer service, innovation and change, networked organizations, work-life balance, people skills, positive work environment, ethics)	
II	<ul> <li>INDIVIDUAL BEHAVIOUR:</li> <li>1. Learning, attitude and Job satisfaction: Concept of learning, conditioning, shaping and reinforcement. Concept of attitude, components, behavior and attitude. Job satisfaction: causation; impact of satisfied employees on workplace.</li> <li>2. Motivation : Concept; Theories (Hierarchy of needs, X and Y, Two factor, McClelland, Goal setting, Self-efficacy, Equity theory); Job characteristics model; Redesigning jobs,</li> <li>3. Personality and Values : Concept of personality; Myers-Briggs Type Indicator (MBTI); Big Five model. Relevance of values; Linking personality and values to the workplace (person-job fit, person-organization fit)</li> <li>4. Perception, Decision Making : Perception and Judgements; Factors; Linking perception to individual decision making:</li> </ul>	6
III	GROUP BEHAVIOUR : 1. Groups and Work Teams : Concept : Five Stage model of group development; Group norms, cohesiveness ; Group think and shift ; Teams; types of teams; Creating team players from individuals and team based work(TBW) 2. Leadership : Concept; Trait theories; Behavioral theories (Ohio and Michigan studies); Contingency theories (Fiedler, Hersey and Blanchard, Path-Goal);	6
IV	ORGANISATIONAL CULTURE AND STRUCTURE : Concept of culture; Impact (functions and liability); Creating and sustaining culture: Concept of structure, Prevalent organizational designs: New design options	6
V	ORGANISATIONAL CHANGE, CONFLICT AND POWER: Forces of change; Planned change; Resistance; Approaches (Lewin's model, Organisational development);. Concept of conflict, Conflict process; Types, Functional/ Dysfunctional. Introduction to power and politics.	6
		30
Course Outcomes	On Completion of the course the students will	
CO1	To define OrganisationalBehaviour, Understand the opportunity throu	-
CO2	To apply self-awareness, motivation, leadership and learning theories workplace.	at
CO3	To analyze the complexities and solutions of group behaviour.	
CO4	To impact and bring positive change in the culture of the organisaitor	l <b>.</b>

CO5	To create a congenial climate in the organization.
