

PERIYAR UNIVERSITY

PERIYAR PALKALAI NAGAR SALEM-636011

DEGREE OF BACHELOR OF SCIENCE

Syllabus for

B.Sc., Computer Science (Artificial Intelligence And Machine Learning)

(SEMESTER PATTERN- CBCS)

(For Candidates admitted in the colleges affiliated to

Periyar university from 2023-2024 onwards)

1. Introduction

B.Sc. Computer Science (Artificial Intelligence and Machine Learning)

Artificial Intelligence and Machine Learning is a hot core field that is rapidly growing in the fast-changing world and powering for great industrial revolution. The world workforce has changed the way the business grows without affecting humanity. A software giant predicted that around 75 million conventional jobs may disappear while 130 million jobs created during the revolution of AI and ML. It is estimated that by 2025, 30% of the jobs will end-up unfilled due to required skills shortage.

Many organizations already face a shortage of skilled talents across different verticals. Technical jobs increasingly require technology skills, organizations have begun to search for skilled persons with specialized skills such as data scientists, robotics experts and AI engineers and block chain developers etc.

The course is designed to bridge the gap between IT industries and academic institutes by incorporating the latest Artificial Intelligence technologies into the curriculum and to give students a complete understanding within a structured framework. The curriculum supports students to gain adequate knowledge in advanced programming as well as Artificial Intelligence practices along with theoretical foundation and also includes interdisciplinary courses and electives for widening the domain expertise. State-of-the-art infrastructure provides an excellent learning environment to hone the knowledge of each student.

The course provides the strong foundations in fundamentals of computer science with the knowledge of AI and Virtual Reality for employability and/or further studies in Post-graduation. Empower students with competencies in creative thinking, working in virtual domain with AI technique problem solving in virtual domain, inter-personal communication and managerial skills. Facilitate overall understanding of the technological development with legal and ethical issues. Equip the students in providing professional solutions to next generation solutions using AI techniques and adopting Virtual Reality concepts.

This is the primary reason the syllabus of Machine learning courses includes concepts that touch base on cloud computing, big data, natural language processing, and data sentiment analysis. The future of Machine Learning is estimated to bring opportunities in various areas of banking,

finance, insurance, entertainment, telecommunication, automobile, etc. A data scientist will help grow an organization by assisting them in making better decisions. Artificial Intelligence has become important due to recent technology disruptions. Most fundamental is Moore's Law which has driven an exponential growth in computing, storage, and communications per rupee over the past 50 years. This rate of growth shows no signs of abating. Consequently, today we have the Internet of Things: a plethora of sensors costing 10s of rupees or less, a global Internet with almost limitless bandwidth, and enormous storage in global clouds. The present era is full of technological advances in almost all spectrum of life and we are flooded with enormous amount of data. There is an increasing demand of capturing, analyzing, and synthesizing this large amount of data sets in a number of application domains to better understand various phenomena and to convert the information available in the data into actionable strategies such as new scientific discoveries, business applications, policy making, and healthcare etc.

Programme:	B.Sc., Computer Science (Artificial Intelligence and Machine Learning)						
Programme Code:							
Duration:	3 years [UG]						
Programme Outcomes:	PO1: Disciplinary knowledge: Capable of demonstrating comprehensive knowledge and understanding of one or more disciplines that form a part of an undergraduate Programme of study						
	PO2: Communication Skills: Ability to express thoughts and ideas effectively in writing and orally; Communicate with others using appropriate media confidently share one's views and express herself/himself; demonstrate the ability to listen carefully, read and write analytically, and present complex information in a clear and concise manner to different groups.						
	PO3: Critical thinking: Capability to apply analytic thought to a body o knowledge; analyse and evaluate evidence, arguments, claims, beliefs on the basis of empirical evidence; identify relevant assumptions or implications formulate coherent arguments; critically evaluate practices, policies and theories by following scientific approach to knowledge development.						
	PO4: Problem solving: Capacity to extrapolate from what one has learned and apply their competencies to solve different kinds of non-familiar problems,						

real life situations.

- **PO5: Analytical reasoning**: Ability to evaluate the reliability and relevance of evidence; identify logical flaws and holes in the arguments of others; analyze and synthesize data from a variety of sources; draw valid conclusions and support them with evidence and examples, and addressing opposing viewpoints.
- **PO6:** Research-related skills: A sense of inquiry and capability for asking relevant/appropriate questions, problem arising, synthesising and articulating; Ability to recognise cause-and-effect relationships, define problems, formulate hypotheses, test hypotheses, analyse, interpret and draw conclusions from data, establish hypotheses, predict cause-and-effect relationships; ability to plan, execute and report the results of an experiment or investigation
- **PO7:** Cooperation/Team work: Ability to work effectively and respectfully with diverse teams; facilitate cooperative or coordinated effort on the part of a group, and act together as a group or a team in the interests of a common cause and work efficiently as a member of a team
- **PO8: Scientific reasoning**: Ability to analyse, interpret and draw conclusions from quantitative/qualitative data; and critically evaluate ideas, evidence and experiences from an open-minded and reasoned perspective.
- **PO9: Reflective thinking**: Critical sensibility to lived experiences, with self awareness and reflexivity of both self and society.
- **PO10 Information/digital literacy:** Capability to use ICT in a variety of learning situations, demonstrate ability to access, evaluate, and use a variety of relevant information sources; and use appropriate software for analysis of data.
- **PO 11 Self-directed learning**: Ability to work independently, identify appropriate resources required for a project, and manage a project through to completion.
- **PO 12 Multicultural competence:** Possess knowledge of the values and beliefs of multiple cultures and a global perspective; and capability to effectively engage in a multicultural society and interact respectfully with diverse groups.
- PO 13: Moral and ethical awareness/reasoning: Ability to embrace moral/ethical values in conducting one's life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Capable of demon starting the ability to identify ethical issues related to one"s work, avoid unethical behaviour such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights; appreciating environmental and sustainability issues; and adopting objective, unbiased and truthful actions in all aspects of work.
- **PO 14: Leadership readiness/qualities:** Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision,

building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination, in a smooth and efficient way.

PO 15: Lifelong learning: Ability to acquire knowledge and skills, including "learning how to learn", that are necessary for participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives, and adapting to changing trades and demands of work place through knowledge/skill development/reskilling.

Programme Specific Outcomes:

PSO1: To enable students to apply basic microeconomic, macroeconomic and monetary concepts and theories in real life and decision making.

PSO 2: To sensitize students to various economic issues related to Development, Growth, International Economics, Sustainable Development and Environment.

PSO 3: To familiarize students to the concepts and theories related to Finance, Investments and Modern Marketing.

PSO 4: Evaluate various social and economic problems in the society and develop answer to the problems as global citizens.

PSO 5: Enhance skills of analytical and critical thinking to analyze effectiveness of economic policies.

PSO 4	Y	Y	Y	Y	Y	Y	Y	Y
PSO 5	Y	Y	Y	Y	Y	Y	Y	Y

Highlights of the Revamped Curriculum:

- ➤ Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- ➤ The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, devising mathematical models and algorithms for providing solutions to industry / real life situations. The curriculum also facilitates peer learning with advanced mathematical topics in the final semester, catering to the needs of stakeholders with research aptitude.
- ➤ The General Studies and Mathematics based problem solving skills are included as mandatory components in the _Training for Competitive Examinations' course at the final semester, a first of its kind.
- ➤ The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- ➤ The Industrial Statistics course is newly introduced in the fourth semester, to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.
- ➤ The Internship during the second year vacation will help the students gain valuable work experience, that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge to practical situations. The state of art technologies in conducting a Explain in a scientific and systematic way and arriving at a precise solution is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.
- ➤ State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest Artificial Intelligence.

Value additions in the Revamped Curriculum:

Semester	Newly introduced Components	Outcome / Benefits
I	Foundation Course To ease the transition of learning from higher secondary to higher education, providing an overviewof the pedagogy of learningLiterature and analyzing the world through the literary lens Gives rise to a new perspective.	➤ Instill confidence among students ➤ Create interest for thesubject
I, II, III, IV	Skill Enhancement papers (Discipline centric / Generic / Entrepreneurial)	 Industryreadygraduates Skilled human resource Students are equippedwith essential skills tomake them employable Training on language and communication skills enable the students gain Knowledge and exposure in the competitive world. Discipline centric skill will improve the Technical knowhow of solving real life problems.
III, IV, V & VI	Elective papers	 Strengthening the domain knowledge Introducing the stake holders to the State-of Art techniques from the streams ofmulti-disciplinary, cross disciplinary andinter disciplinary nature Emerging topics inhigher education/industry/communication network/health sectoretc. are introduced with hands-on-training.

IV	Elective Papers	 Exposure to industrymoulds students into solution providers Generates Industryready graduates Employment opportunities enhanced 				
V	Elective papers	 Self-learning isenhanced Application of the concept to real situationis conceived resulting in tangible outcome 				
VI	Elective papers	 Enriches the studybeyond the course. Developing a researchframework and presenting their independent and intellectual ideaseffectively. 				
For Ad	Extra Credits: vanced Learners / Honors degree	To cater to the needs ofpeer learners / research aspirants				
Ski	ills acquired from the Courses	Knowledge, Problem Solving, Analytical ability, Professional Competency, Professional Communication and Transferrable Skill

Course Objectives:

- 1. Be able to design and program C++ applications.
- 2. Be able to create loops and decision statements in C++.
- 3. Be able to work with functions and pass arguments in C++.
- 4. Be able to work on the concept of Inheritance.
- 5. Be able to read and write files in C++.

AB EXERCISES:	75
AB EXERCISES:	
Program using Class and Object.	
2. Program using C++ operators.	
3. Program using Decision-making statements	
4. Program using Loop Statements.	
5. Program using Library function.	
6. Program using Inline Function.	
7. Program in Passing object to function	
8. Program in Returning object from function	
9. Program using Constructor and Destructor.	
10. Program using Function Overloading.	
11. Program using Virtual Function	
12. Program using Static data members and member functions	
13. Program using Inheritance.	
14. Program using Command line arguments.	
15. Program using File Handling	

	Course Outcomes								
	On completion of this course, students will								
CO1	To understand the concepts of Object-Oriented Programming Paradigm and the programming constructs of C++								
CO2	Illustrate the concept of Virtual Classes, inline functions and friend functions								
CO3	Compare the various file stream classes; file types, usage of templates and exception handling mechanisms.								
CO4	Compare the pros and cons of procedure oriented language with the concepts of object oriented language								
CO5	Apply the various basic programming constructs like decision making statements. Looping statements, functions, concepts like overloading, inheritance, polymorphism, virtual functions, constructors and destructors

Objectives

- Use an integrated development environment to write, compile, run, and test simple object-oriented Java programs.
- Read and make elementary modifications to Java programs that solve real-world problems.
- Be able to create an application using string concept.
- Be able to create a program using files in application.
- Be able to create an Applet to create an application.
- Identify and fix defects and common security issues in code.

	Required

LIST OF PROGRAMS	75
Applications:	
1. Program using Class and Object.	
2. Program using Constructors.	
3. Program using Command-Line Arguments.	
4. Program using Random Class.	
5. Program using Vectors.	
6. Program using String Tokenizer Class.	
7. Program using Interface.	
8. Program using all forms of Inheritance.	
9. Program using String class.	
10. Program using String Buffer class.	
11. Program using Exception Handling.	
12. Implementing Thread based applications	
13. Program using Packages.	
14. Program using Files.	
Applets:	
15. Working with Colors and Fonts.	
16. Parameter passing technique.	
17. Drawing various shapes using Graphical statements.	
18. Usage of AWT components and Listener in suitable applications.	

	Course Outcomes								
CO	On completion of this course, students will								
	To understand the concepts of Linked List, Stack and Queue.								
CO1									
	Concepts of Trees and Graphs. Perform traversal operations on Trees and								
CO2	Graphs.								
	To enable the applications of Trees and Graphs.								
	To apply searching and sorting techniques								
CO3									
	To determine the concepts of Greedy Method To apply searching techniques.								
CO4									
CO5	Usage of File handlings in python, Concept of reading and writing files, Do programs								
	using files.

Code		Catego					Credits	CIA	Exter nal	Total
	PYTHON LAB	CC VI	-	-	3	III	3	25	75	100

Learning Objectives:

- Acquire programming skills in core Python.
- Acquire Object-oriented programming skills in Python.
- Develop the skill of designing graphical-user interfaces (GUI) in Python.
- Develop the ability to write database applications in Python.
- Acquire Python programming skills to move into specific branches

Course Outcomes:

CO1: To understand the problem solving approaches

CO2: To learn the basic programming constructs in Python

CO3: To practice various computing strategies for Python-based solutions to real world problems

CO4: To use Python data structures - lists, tuples, dictionaries.

CO5: To do input/output with files in Python.

List of Exercises:	Required Hours
Program to convert the given temperature from	60
Fahrenheit to Celsius and vice versa depending upon	
user's choice.	
2. Program to calculate total marks, percentage and	
grade of a student. Marks obtained in each of the five	
subjects are to be input by user. Assign grades	
according to the following criteria:	
Grade A: Percentage >=80 Grade B:	
Percentage >=70 and 80	
Grade C: Percentage >=60 and <70 Grade D:	
Percentage >=40 and <60	
Grade E: Percentage < 40	
3. Program, to find the area of rectangle, square, circle	
and triangle by accepting suitable input parameters	

from user.

- 4. Write a Python script that prints prime numbers less than 20.
- 5. Program to find factorial of the given number using recursive function.
- 6. Write a Python program to count the number of even and odd numbers from array of N numbers.
- Write a Python class to reverse a string word by word.
- 8. Given a tuple and a list as input, write a program to count the occurrences of all items of the list in the tuple. (Input: tuple = ('a', 'a', 'c', 'b', 'd'), list = ['a', 'b'], Output: 3)
- Create a Savings Account class that behaves just like a
 BankAccount, but also has an interest rate and a
 method that increases the balance by the appropriate
 amount of interest (Hint:use Inheritance).
- 10. Write a Python program to construct the following pattern, using a nested loop

*

**

**

*

- 11. Read a file content and copy only the contents at odd lines into a new file.
- 12. Create a Turtle graphics window with specific size.

13. Write a Python program for Towers of Hanoi using
recursion
14. Create a menu driven Python program with a
dictionary for words and their meanings.
15. Devise a Python program to implement the Hangman
Game.

Learning Objectives:

To apply the concepts of Machine Learning to solve real-world problems and to implement basic algorithms in clustering & classification applied to text & numeric data

	Required
	Hour
LAB EXERCISES:	75
1. Solving Regression & Classification using Decision Trees	
2. Root Node Attribute Selection for Decision Trees using Information Gain	
3. Bayesian Inference in Gene Expression Analysis	
4. Pattern Recognition Application using Bayesian Inference	
5. Bagging in Classification	
6. Bagging, Boosting applications using Regression Trees	
7. Data & Text Classification using Neural Networks	
8. Using Weka tool for SVM classification for chosen domain application	
9. Data & Text Clustering using K-means algorithm	
10. Data & Text Clustering using Gaussian Mixture Models	

	Course Outcomes
CO	On completion of this course, students will
CO1	Effectively use the various machine learning tools

CO2	Understand and implement the procedures for machine learning algorithms CO3
	Design Python programs for various machine learning algorithms
CO3	
	Apply appropriate datasets to the Machine Learning algorithms
CO4	
	Analyze the graphical outcomes of learning algorithms with specific datasets

	ARTIFICIAL NEURAL NETWORK	Elect	6	-	-	-	5	25	75	100

Learning Objectives:

The objective of this course is to teach the basics of artificial neural networks, learning process, single layer and multi-layer perceptron networks.

Course Outcomes:

CO1: Understand the basics of artificial neural networks and its architecture.

CO2: Understand the various learning algorithms and their applications.

CO3: Identify the appropriate neural network model to a particular application.

CO4: Apply the selected neural network model to a particular application.

CO5: Analyze the performance of the selected neural network.

Units	Contents	Required Hours
I	Artificial Neural Model- Activation functions- Feed forward and Feedback, Convex Sets, Convex Hull and Linear Separability, Non-Linear Separable Problem - Multilayer Networks. Learning Algorithms- Error correction - Gradient Descent Rules, Perceptron Learning Algorithm, Perceptron Convergence Theorem.	15
п	Introduction, Error correction learning, Memory-based learning, Hebbian learning, Competitive learning, Boltzmann learning, credit assignment problem, Learning with and without teacher, learning tasks, Memory and Adaptation	15
III	Single layer Perception: Introduction, Pattern Recognition, Linear classifier, Simple perception, Perception learning algorithm, Modified Perception learning algorithm, Adaptive linear combiner, Continuous perception, learning in continuous perception, Limitation of Perception.	15
IV	Multi-Layer Perceptron Networks: Introduction, MLP with 2 hidden layers, Simple layer of a MLP, Delta learning rule of the output layer, Multilayer feed forward neural network with continuous perceptions, Generalized delta learning rule, Back	15

	propagation algorithm	
V	Deep learning- Introduction- Neuro architectures building blocks for the DL techniques, Deep Learning and Neo cognitron, Deep Convolutional Neural Networks, Recurrent Neural Networks (RNN), feature extraction, Deep Belief Networks, Restricted Boltzmann Machines, Training of DNN and Applications	15

	SOFTWARE ENGINEERING	Elect	6	1	1	1	5	25	75	100

Learning Objectives:

• To understand the software engineering concepts and to create a system model in real

life applications

Course Outcomes:(for students: To know what they are going to learn)

CO1:Gain basic knowledge of analysis and design of systems

CO2: Ability to apply software engineering principles and techniques

CO3:Model a reliable and cost-effective software system

CO4: Ability to design an effective model of the system

CO5: Perform Testing at various levels and produce an efficient system.

Units	Contents	Required Hours
I	Introduction: The software engineering discipline, programs vs. software products, why study software engineering, emergence of software engineering, Notable changes in software development practices, computer systems engineering.	
П	Requirements Analysis and Specification: Requirements gathering and analysis, Software requirements specification (SRS)Software Design: Good software design, cohesion and coupling, neat arrangement, software design approaches, object- oriented vs function-oriented design	
Ш	Function-Oriented Software Design: Overview of SA/SD methodology, structured analysis, data flow diagrams (DFD's), structured design, detailed design.	15
IV	Coding and Testing: Coding; code review; testing; testing in the large vs testing in the small; unit testing; black-box testing; white-box testing; debugging; program analysis tools; integration testing; system testing; some general issues associated with testing.	
V	Software Maintenance: Characteristic of software maintenance; software reverse engineering; software maintenance process models; estimation of maintenance cost;	15

	AGILE PROJECT MANAGEMENT	Elec t	6	-	-	-	5	25	75	100

Learning Objectives:

- To provide students with a theoretical as well as practical understanding of Agile software development practices and how small teams can apply them to creating highquality software.
- To provide a good understanding of software design and a set of software technologies and APIs.
- To provide a detailed examination and demonstration of Agile development and testing techniques.
- To provide an understanding of the benefits and pitfalls of working in an Agile team.

Course Outcomes:

CO1: Understanding of the Agile manifesto and its advantages over other SDLC paradigms.

CO2: Understanding essential Agile concepts.

CO3:Understanding how to plan and execute a project using Agile concepts

CO4: Understanding Agile management concepts.

CO5: Practical application of Agile principles.

Units	Contents	Required Hours
I	Introduction: Modernizing Project Management: Project Management Needed a Makeover – Introducing Agile Project Management. Applying the Agile Manifesto and Principles: Understanding the Agile manifesto – Outlining the four values of the Agile manifesto – Defining the 12 Agile	15

	Principles – Adding the Platinum Principles – Changes as a result of Agile Values – The Agile litmus test. Why Being Agile Works Better: Evaluating Agile benefits – How Agile approaches beat historical approaches – Why people like being Agile. Being Agile: Agile Approaches: Diving under the	
II	umbrella of Agile approaches – Reviewing the Big Three: Lean, Scrum, Extreme Programming - Summary Agile Environments in Action: Creating the physical environment – Low-tech communicating – High-tech communicating – Choosing tools. Agile Behaviours in Action: Establishing Agile roles – Establishing new values – Changing team philosophy.	15
III	Agile Planning and Execution Defining the Product Vision and Roadmap: Agile planning — Defining the product vision — Creating a product roadmap — Completing the product backlog. Planning Releases and Sprints: Refining requirements and estimates — Release planning — Sprint planning. Working Throughout the Day: Planning your day — Tracking progress — Agile roles in the sprint — Creating shippable functionality — The end of the day. Showcasing Work, Inspecting and Adapting: The sprint review — The sprint retrospective. Preparing for Release: Preparing the product for deployment (the release sprint) — Preparing the operational support — Preparing the organization for product deployment — Preparing the marketplace for product deployment	15
IV	Agile Management Managing Scope and Procurement: What's different about Agile scope management — Managing Agile scope — What's different about Agile procurement — Managing Agile procurement. Managing Time and Cost: What's different about Agile time management — Managing Agile schedules — What's different about Agile cost management — Managing Agile budgets. Managing Team Dynamics and Communication: What's different about Agile team dynamics — Managing Agile team dynamics — What's different about Agile communication. Managing Quality and Risk: What's different about Agile quality — Managing Agile quality — What's	15

Agile risk.	
Implementing Agile Building a Foundation: Organizational and individual commitment – Choosing the right pilot team members – Creating an environment that enables Agility – Support Agility initially and over time. Being a Change Agent: Becoming Agile requires change – why change doesn't happen on its own – Platinum Edge's Change Roadmap – Avoiding pitfalls – Signs your changes are slipping. Benefits, Factors for Success and Metrics: Ten key benefits of Agile project management – Ten key factors for project success – Ten metrics for Agile Organizations.

	INTELLIGENCE									

Learning Objectives:

- To provide strong foundation on fundamental concepts in Computing Intelligence
- To apply basic principles of Artificial Intelligence and solutions that require problem solving, influence, perception, knowledge representation and learning

Course Outcomes:

CO1: Describe the fundamentals of artificial intelligence concepts and searching techniques.

CO2: Develop the fuzzy logic sets and membership function and defuzzification techniques.

CO3:Understand the concepts of Neural Network and analyze and apply the learning techniques

CO4: Understand the artificial neural networks and its applications

CO5: Understand the concept of Genetic Algorithm and Analyze the optimization problems using GAs.

Units	Contents	Required Hours
I	Introduction to AI: Problem formulation — AI Applications — Problems — State Space and Search — Production Systems — Breadth First and Depth First — Travelling Salesman Problem — Heuristic search techniques: Generate and Test — Types of Hill Climbing.	15
п	Fuzzy Logic Systems: Notion of fuzziness — Operations on fuzzy sets — T-norms and other aggregation operators — Basics of Approximate Reasoning — Compositional Rule of Inference — Fuzzy Rule Based Systems — Schemes of Fuzzification — Inferencing — Defuzzification — Fuzzy Clustering — fuzzy rule-based classifier.	15
Ш	Neural Networks: What is Neural Network, Learning rules and various activation functions, Single layer Perceptions, Back Propagation networks, Architecture of Backpropagation (BP) Networks, Back propagation Learning, Variation of Standard Back propagation Neural Network, Introduction to Associative Memory, Adaptive Resonance theory and Self Organizing Map, Recent Applications.	15

IV	Artificial Neural Networks: Fundamental Concepts – Basic Models of Artificial Neural Networks – Important Terminologies of ANNs – McCulloch-Pitts Neuron – Linear Separability – Hebb Network.	
V	Genetic Algorithm: Introduction — Biological Background — Genetic Algorithm Vs Traditional Algorithm — Basic Terminologies in Genetic Algorithm — Simple GA — General Genetic Algorithm — Operators in Genetic Algorithm.

SECURITY	t								İ

Learning Objectives:

- To know the objectives of information security
- Understand the importance and application of each of confidentiality, integrity, authentication and availability
- Understand various cryptographic algorithms
- Understand the basic categories of threats to computers and networks

Course Outcomes:

CO1: Understand network security threats, security services, and countermeasures

CO2: Understand vulnerability analysis of network security

CO3: Acquire background on hash functions; authentication; firewalls; intrusion detection techniques.

CO4: Gain hands-on experience with programming and simulation techniques for security protocols.

CO5: Apply methods for authentication, access control, intrusion detection and prevention.

Units	Contents	Required Hours
I	Introduction to Information Security: Security mindset, Computer Security Concepts (CIA), Attacks, Vulnerabilities and protections, Security Goals, Security Services, Threats, Attacks, Assets, malware, program analysis and mechanisms.	15
п	The Security Problem in Computing: The meaning of computer Security, Computer Criminals, Methods of Defense. Cryptography: Concepts and Techniques: Introduction, plain text and cipher text, substitution techniques, transposition techniques, encryption and decryption	15
Ш	Symmetric and Asymmetric Cryptographic Techniques: DES, AES, RSA algorithms .Authentication and Digital Signatures: Use of Cryptography for authentication, Secure Hash function, Key management – Kerberos.	15
IV	Program Security: Non-malicious Program errors — Buffer overflow, Incomplete mediation, Time-of-check to Time-of-use Errors, Viruses, Trapdoors, Salami attack, Man-in-the-middle attacks, Covert channels. File protection Mechanisms, User Authentication Designing Trusted O.S: Security polices, models of security, trusted O.S design, Assurance in trusted O.S. Implementation examples.	15

	GRID COMPUTING	Elec	6	-	-	-	5	25	75	100

Learning Objectives:

- To provide the knowledge on the basic construction and use of Grid computing.
- To know and understand the grid computing applications.
- To assess the efficiency of the grid computing in solving large scale scientific problems

Course Outcomes:

CO1:To understand the basic elements and concepts related to Grid computing

CO2: To identify the Grid computing toolkits and Framework.

CO3:To know about the concepts of Virtualization

CO4: To analyze the concept of service oriented architecture.

CO5:To Gain knowledge on grid and web service architecture.

Units	Contents	Required Hours
I	Introduction: Early Grid Activity, Current Grid Activity, Overview of Grid Business areas, Grid Applications, Grid Infrastructures.	15
П	Grid Computing organization and their Roles: Organizations Developing Grid Standards, and Best Practice Guidelines, Global Grid Forum (GCF), #Organization Developing Grid Computing Toolkits and Framework#, Organization and building and using grid based solutions to solve computing, commercial organization building and Grid Based solutions.	15
Ш	Grid Computing Anatomy: The Grid Problem, The conceptual of virtual organizations, # Grid Architecture # and relationship to other distributed technology	
IV	The Grid Computing Road Map: Autonomic computing, Business on demand and infrastructure virtualization, Service-Oriented Architecture and Grid, #Semantic Grids#.	15

LearningObjectives:(forteachers:whattheyhavetodointheclass/lab/field)

- The major objective in introducing the Computer Skills course is to impart training for students in Microsoft Office which has different components like MS Word, MS Excel and Power point.
- The course is highly practice oriented rather than regular class room teaching.
- To acquire knowledge on editor, spreadsheet and presentation software.

Course Outcomes:(for students: To know what they are going to learn)

CO1: Understand the basics of computer systems and its components.

CO2: Understand and apply the basic concepts of a word processing package.

CO3: Understand and apply the basic concepts of electronic spreadsheet software.

CO4: Understand and apply the basic concepts of database management system.

CO5: Understand and create a presentation using PowerPoint tool.

Units	Contents	Required Hours
I	Introductory concepts: Memory unit— CPU-Input	6
	Devices: Key board, Mouse and Scanner. Output	
	devices: Monitor, Printer. Introduction to Operating	
	systems &its features: DOS- UNIX-Windows.	
	Introduction to Programming Languages.	
II	Word Processing: Open, Save and close word	6
	document; Editing text – tools, formatting, bullets;	
	Spell Checker - Document formatting - Paragraph	
	alignment, indentation, headers and footers,	
	numbering; printing-Preview, options, merge.	
III	Spreadsheets: Excel-opening, entering extend data,	6
	formatting, navigating; Formulas-entering, handling	
	and copying; Charts-creating, formatting and printing,	
	analysis tables, preparation of financial statements,	
	introduction to data analytics.	
IV	Database Concepts: The concept of data base	6
	management system; Data field, records, and files,	

	Sorting and indexing data; Searching records. Designing queries, and reports; Linking of data files; Understanding Programming environment in DBMS; Developing menu drive application sin query language (MS–Access).	
V	Power point: Introduction to Power point - Features – Understanding slide typecasting & viewing slides – creating slide shows. Applying special object – including objects & pictures – Slide transition– Animation effects, audio inclusion, timers.	6

	CYBER FORENSICS	SEC	2	-	-	-	2	25	75	100

Learning Objectives:

- To correctly define and cite appropriate instances for the application of computer forensics.
- To Correctly collect and analyze computer forensic evidence and data seizure. Identify the essential and up–to–date concepts, algorithms, protocols, tools, and methodology of Computer Forensics.

Course Outcomes:

CO1: Understand the definition of computer forensics fundamentals.

CO2: Evaluate the different types of computer forensics technology.

CO3: Analyze various computer forensics systems.

CO4: Apply the methods for data recovery, evidence collection and data seizure.

CO5: Gain your knowledge of duplication and preservation of digital evidence.

Units	Contents	Required Hours
I	 Overview of Computer Forensics Technology: Computer Forensics Fundamentals: What is Computer Forensics? Use of Computer Forensics in Law Enforcement, Computer Forensics Assistance to Human Resources/Employment Proceedings, Computer Forensics Services, Benefits of professional Forensics Methodology, Steps taken by Computer Forensics Specialists. Types of Computer. Forensics Technology: Types of Business Computer Forensic, Technology—Types of 	6
II	Computer Forensics Evidence and capture:	6

	 Data Recovery: Data Recovery Defined, Data Backup and Recovery, The Role of Back –up in Data Recovery, The Data –Recovery Solution Evidence Collection and Data Seizure: Collection Options, Obstacles, Types of Evidence. The Rules of Evidence, Volatile Evidence, General Procedure, Collection and Archiving, Methods of Collections, Artefacts, Collection Steps, Controlling Contamination: The chain of custody. 	
Ш	 Duplication and Preservation of Digital Evidence: Processing steps, Legal Aspects of collecting and Preserving Computer forensic Evidence. Computer image Verification and Authentication: Special needs of Evidential Authentication, Practical Consideration, Practical Implementation. 	6
IV	 Computer Forensics Analysis: Discovery of Electronic Evidence: Electronic Document Discovery: A Powerful New Litigation Tool. Identification of Data: Time Travel, Forensic Identification and Analysis of Technical Surveillance Devices. 	
V	 Reconstructing Past Events: How to Become a Digital Detective, Useable File Formats, Unusable File Formats, Converting Files. Networks: Network Forensics Scenario, a technical approach, Destruction Of E–Mail, Damaging Computer Evidence, Documenting The Intrusion on Destruction of Data, System Testing. 	6

	SOFTWARE TESTING	SEC	2	-	1	ı	2	25	75	100

Learning Objectives:

- To study various Software techniques
- To study fundamental concepts in software testing

Course Outcomes:

CO1: Understand and describe the basic concepts of functional (black box) software testing.

CO2: Understand the basic application of techniques used to identify useful ideas for tests.

CO3: Help determine the mission and communicate the status of your testing with the rest of your project team.

CO4: Characterize a good bug report, peer-review the reports of your colleagues, and improve your own report writing.

CO5: Understand where key testing concepts apply within the context of unified processes.

Units	Contents	Required Hours
I	Introduction: Purpose–Productivity and Quality in Software– Testing Vs Debugging– Model for Testing– Bugs– Types of Bugs – Testing and Design Style.	6
П	Flow / Graphs and Path Testing – Achievable paths	6

	 Path instrumentation – Application– Transaction Flow Testing Techniques 	
Ш	Data Flow Testing Strategies - Domain Testing: Domains and Paths - Domains and Interface Testing.	6
IV	Linguistic–Metrics – Structural Metric – Path Products and Path Expressions. Syntax Testing– Formats–Test Cases.	6
V	Logic Based Testing – Decision Tables–Transition Testing– States, State Graph, State Testing.	6

	DATA MINING AND WAREHOUSING	SEC	2	-	-	1	2	25	75	100

Learning Objectives:

- To provide the knowledge on Data Mining and Warehousing concepts and techniques.
- To study the basic concepts of cluster analysis
- To study a set of typical clustering methodologies, algorithms and applications.

Course Outcomes:

CO1:To understand the basic concepts and the functionality of the various data mining and data warehousing component

CO2: To know the concepts of Data mining system architectures

CO3:To analyze the principles of association rules

CO4: To get analytical idea on Classification and prediction methods.

CO5: To Gain knowledge on Cluster analysis and its methods.

Recap:(notforexamination)Motivation/previouslecture/relevantportionsrequiredforthe course)[Thisisdoneduring2Tutorialhours)

Units	Contents	Required Hours
I	Introduction: Data mining – Functionalities – Classification – Introduction to Data Warehousing – Data Preprocessing: Preprocessing the Data – Data cleaning – Data Integration and Transformation – Data Reduction.	
П	Data Mining, Primitives, Languages and System Architecture: Data Mining – Primitives – Data Mining Query Language, Architecture of Data mining Systems. Concept Description, Characterization and Comparison: Concept Description, Data Generalization and Summarization.	6
Ш	Mining Association Rules: Basic Concepts – Single Dimensional Boolean Association Rules From Transaction Databases, Multilevel Association Rules from transaction databases.	
IV	Classification and Prediction: Introduction – Issues – Decision Tree Induction – Bayesian Classification – Classification of Back Propagation.	6
V	Cluster Analysis: Introduction – Types of Data in Cluster Analysis, Petitioning Methods – Hierarchical Methods-Density Based Methods	6

		Categor					Credit	CIA	Exter	Total
	BIOMETRICS	SEC	2	-	-	-	2	25	75	100

Learning Objectives:(forteachers:whattheyhavetodointheclass/lab/field)

- To learn and understand biometric technologies and their functionalities.
- To learn the role of biometrics, computational methods, context of Biometric Applications.
- To learn to develop applications with biometric security

Course Outcomes: (forstudents: Toknowwhattheyaregoingtolearn)

CO1: Identify the various biometric technologies.

CO2: Design of biometric recognition.

CO3: Develop simple applications for privacy

CO4: Understand the need of biometric in the society **CO5:** Understand the scope of biometric techniques

Units	Contents	Required Hours
I	 Introduction: What is Biometrics, History, Types of biometric Traits, General architecture of biometric systems, Basic working of biometric matching. Face Biometrics: Introduction, Background of Face Recognition, Design of Face Recognition System. 	6
п	Retina and Iris Biometrics: Introduction, Performance of Biometrics, Design of Retina Biometrics, Design of Iris	6

	Recognition System, Iris Segmentation Method ,	
	Determination of Iris Region, Determination of Iris Region.	
Ш	Privacy Enhancement Using Biometrics: Introduction. Privacy Concerns Associated with Biometric Deployments, Identity and Privacy, Privacy Concerns, Biometrics with Privacy Enhancement, Comparison of Various Biometrics in Terms of Privacy, Soft Biometrics.	6
IV	Watermarking Techniques: Introduction, Data Hiding Methods, Basic Framework of Watermarking, Classification of Watermarking, Applications of Watermarking, Attacks on Watermarks, Performance Evaluation, Characteristics of Watermarks, General Watermarking Process.	6
V	Scope and Future: Scope and Future Market of Biometrics, Biometric Technologies, Applications of Biometrics, Biometrics and Information Technology Infrastructure, Role of Biometrics in Enterprise Security, Role of Biometrics in Border Security, Smart Card Technology and Biometrics.	6

	RESOURCE PLANNING									

Learning Objectives:(forteachers:whattheyhavetodointheclass/lab/field)

- Understand the concept of ERP and the ERP model; define key terms; identify the levels of ERP maturity.
- To integrate business processes; define and analyze a process; create a process map and improve and/or simplify the process; apply the result to an ERP implementation.
- To know the elements of a value chain, and explain how core processes relate; identify how the organizational infrastructure supports core business processes; explain the effect of a new product launch on the three core business processes

Course Outcomes:(forstudents:Toknowwhattheyaregoingtolearn)

CO1: Understand the basic concepts of ERP.

CO2: Identify different technologies used in ERP

CO3:Understand and apply the concepts of ERP Manufacturing Perspective and ERP Modules

CO4: Discuss the benefits of ERP

CO5: Apply different tools used in ERP

Units	Contents	Required Hours
I	ERP Introduction, Benefits, Origin, Evolution and Structure: Conceptual Model of ERP, the Evolution of ERP, the Structure of ERP, Components and needs of ERP, ERP Vendors; Benefits & Limitations of ERP Packages.	
п	Need to focus on Enterprise Integration/ERP; Information mapping; Role of common shared Enterprise database; System Integration, Logical vs. Physical System Integration, Benefits & limitations of System Integration.	
Ш	ERP Marketplace and Marketplace Dynamics: Market Overview, Marketplace Dynamics, the Changing ERP Market. ERP- Func-tional Modules: Introduction, Functional	6

	Modules of ERP Software, Integration of ERP, Supply chain.	
IV	ERP Implementation Basics, , ERP implementation Strategy, ERP Implementation Life Cycle ,Pre- Implementation task,Role of SDLC/SSAD, Object Oriented Architecture, Consultants, Vendors and Employees.	6
V	ERP & E-Commerce, Future Directives- in ERP, ERP and Internet, Critical success and failure factors, Integrating ERP into or-ganizational culture. Using ERP tool: either SAP or ORACLE format to case study.

LearningObjectives:(forteachers:whattheyhavetodointheclass/lab/field)

- To make the students familiar with the various drive systems of robots, sensors and their applications in robots
- To introduce the parts of robots, basic working concepts and types of robots

Course Outcomes: (forstudents:Toknowwhattheyaregoingtolearn)

CO1:Describe the different physical forms of robot architectures

CO2: Kinematically model simple manipulator and mobile robots

CO3: Mathematically describe a kinematic robot system.

CO4: Analyze manipulation and navigation problems using knowledge of coordinate frames, kinematics, optimization, control, and uncertainty.

CO5: Program robotics algorithms related to kinematics, control, optimization, and uncertainty.

Units	Contents	Required Hours
I	Introduction: Introduction, brief history, components of robotics, classification, workspace, work-envelop, motion of robotic arm, end-effectors and its types, service robot and its application, Artificial Intelligence in Robotics.	6
п	Actuators and sensors :Types of actuators, stepper-DC-servo-and brushless motors- model of a DC servo motor-types of transmissions-purpose of sensor-internal and external sensor-common sensors-encoders tachometers	6
Ш	Localization: Self-localizations and mapping - Challenges in localizations — IR based localizations — vision based localizations — Ultrasonic based localizations - GPS localization systems.	6
IV	Path Planning :Introduction, path planning-overview-road map path planning-cell decomposition path planning potential field path planning-obstacle avoidance-case studies	
V	Application: Ariel robots-collision avoidance robots for agriculture-mining-exploration-underwater-civilian-military applications- nuclear applications-space applications	6

	MODELING									

LearningObjectives:(forteachers:whattheyhavetodointheclass/lab/field)

In this course, modeling and simulation (M&S) methodologies considering the theoretical aspects. A wide range of Modeling and Simulation concepts that will lead you to develop your own M&S applications. Students learn the methodologies and tools for simulation and modeling of a real time problem/ mathematical model.

Course Outcomes:(forstudents:Toknowwhattheyaregoingtolearn)

CO1:Introduction To Modeling & Simulation, Input Data Analysis and Modeling.

CO2: Random Variate and Number Generation. Analysis of Simulations and methods.

CO3:Comparing Systems via Simulation

CO4: Entity Body Modeling, Visualization, Animation.

CO5: Algorithms and Sensor Modeling.

Units	Contents	Required Hours
I	Introduction To Modeling & Simulation – What is Modeling and Simulation? – Complexity Types – Model Types – Simulation Types – M&S Terms and Definitions Input Data Analysis – Simulation Input Modeling	6
п	Random Variate Generation – Random Numbers – Random Number Generators – General principles – Inverse Transform Method –Acceptance Rejection Method – Composition Method –Relocate and Rescale Method - Specific distributions-Output Data Analysis	6
Ш	Comparing Systems via Simulation – Introduction – Comparison Problems - Comparing Two Systems - Screening Problems - Selecting the Best - Comparison with a Standard - Comparison with a Fixed Performance Discrete Event Simulations – Introduction - Next-Event Time Advance -	0
IV	Entity Modeling – Entity Body Modeling – Entity Body Visualization – Entity Body Animation – Entity Interaction Modeling – Building Modeling Distributed Simulation – High Level Architecture (HLA) – Federation Development and Execution Process (FEDEP)	6
V	Optimization Algorithms – Genetic Algorithms – Simulated Annealing Examples: Sensor Systems Modeling – Human Eye Modeling – Optical Sensor Modeling – Radar Modeling.

LearningObjectives:(forteachers:whattheyhavetodointheclass/lab/field)

The objective of this course is to teach the fundamentals of quantum information processing, including quantum computation, quantum cryptography, and quantum information theory.

Course Outcomes: (forstudents: Toknowwhattheyaregoingtolearn)

CO1: Analyze the behaviour of basic quantum algorithms

CO2:Implement simple quantum algorithms and information channels in the quantum circuit model

CO3:Simulate a simple quantum error-correcting code

CO4: Prove basic facts about quantum information channels

CO5:

Units	Contents	Required Hours
I	Introduction to PHP -Basic Knowledge of websites -	6
	Introduction of Dynamic Website -Introduction to PHP -	
	Scope of PHP -XAMPP and WAMP Installation- PHP	
	Programming Basics -Syntax of PHP	
II	Introduction to PHP Variable -Understanding Data Types -	6
	Using Operators -Using Conditional Statements -If(), else if()	
	and else if condition Statement -Switch() Statements -Using	
	the while() Loop -Using the for() Loop	
III	PHP Functions -PHP Functions -Creating an Array -	6
	Modifying Array Elements -Processing Arrays with Loops -	
	Grouping Form Selections with Arrays -Using Array	
IV	PHP Advanced Concepts -Reading and Writing Files -	6
	Reading Data from a File -Managing Sessions and Using	
	Session Variables	
V	OOPS Using PHP -OOPS Concept-Class, Object.	6
	Abstractions, Encapsulation, Inheritance, Polymorphism -	
	Creating Classes and Object in PHP-Cookies and Session	
	Management

LearningObjectives:(forteachers:whattheyhavetodointheclass/lab/field)

- To study the number theory used for network security
- To understand the design concept of cryptography and authentication

To develop experiments on algorithm used for security

Course Outcomes:(forstudents:Toknowwhattheyaregoingtolearn)

CO1: Develop an understanding of the fundamentals of networking and security

CO2: Gain an appreciation for the complexities of protecting networks and systems from attack

CO3: Learn about the tools used to detect and protect against malicious attacks

CO4: Develop the skills to configure various security-related technologies

CO5: Utilize protocols such as TLS/SSL, IPSec, and SNMP in order to build secure systems.

Units	Contents	Required Hours
I	Model of network security—Security attacks, services and attacks— OSI security architecture — Classical encryption techniques — SDES — Block cipher Principles DES— Strength of DES—Block cipher design principles — Block cipher mode of operation	6
II	Number Theory— Prime number—Modular arithmetic— Euclid's algorithm	6
Ш	Authentication requirement – Authentication function – MAC – Hash function –Security of hash function and MAC – SHA - HMAC – CMAC	6
IV	Authentication applications – Kerberos – X.509 Authentication services - E-mail security–IP security- Web security.	6

SKILL ENHANCEMEN T COURSE	IMAGE PROCESSING	SEC	2	-	-	-	2	2	25	75	100	

LearningObjectives:(forteachers:whattheyhavetodointheclass/lab/field)

- To become familiar with digital image fundamentals
- To get exposed to simple image enhancement techniques in Spatial and Frequency domain.
- To learn concepts of degradation function and restoration techniques.
- To study the image segmentation and representation techniques.
- To become familiar with image compression and recognition methods

Course Outcomes:(forstudents:Toknowwhattheyaregoingtolearn)

CO1: Gain a fundamental understanding of digital image processing

CO2: Learn the basics of how digital images are represented and processed

CO3: Understand image enhancement techniques

CO4: Develop your programming skills to apply digital image processing algorithms

CO5: Design solutions for real-world problems that involve digital image processing.

Units	Contents	Required Hours
I	DIGITAL IMAGE FUNDAMENTALS: Steps in Digital Image Processing – Components – Elements of Visual Perception – Image Sensing and Acquisition – Image Sampling and Quantization	6
П	IMAGE ENHANCEMENT: Spatial Domain: Gray level transformations – Histogram processing – Basics of Spatial Filtering– Smoothing and Sharpening Spatial Filtering,	6
Ш	IMAGE RESTORATION: Image Restoration - degradation model, Properties, Noise models – Mean Filters – Order Statistics – Adaptive filters	6
IV	IMAGE SEGMENTATION: Edge detection, Edge linking via Hough transform – Thresholding - Region based segmentation – Region growing – Region splitting and merging	
V	IMAGE COMPRESSION AND RECOGNITION: Need for data compression, Huffman, Run Length Encoding, Shift codes, Arithmetic coding, JPEG standard, MPEG.	6
