

PERIYAR UNIVERSITY

SALEM-636011

DEGREE OF BACHELOR OF SCIENCE

Syllabus for

B.Sc., Computer Science(Cyber Security)

(SEMESTER PATTERN- CBCS)

(For Candidates admitted in the colleges affiliated to Periyar University from 2023-2024 onwards)

1. Introduction

B.Sc. Computer Science (Cyber Security)

B.Sc. Computer Science with Cyber Security Education is the key to development of any society. Role of higher education is crucial for securing right kind of employment and also to pursue further studies in best available world class institutes elsewhere within and outside India. Quality education in general and higher education in particular deserves high priority to enable the young and future generation of students to acquire skill, training and knowledge in order to enhance their thinking, creativity, comprehension and application abilities and prepare them to compete, succeed and excel globally. Learning Outcomes-based Curriculum Framework (LOCF) which makes it student-centric, interactive and outcome-oriented with well-defined aims, objectives and goals to achieve. LOCF also aims at ensuring uniform education standard and content delivery across the state which will help the students to ensure similar quality of education irrespective of the institute and location.

Cyber Security is the study of Security, quantity, structure, space and change, focusing on problem solving, application development with wider scope of application in science, engineering, technology, social sciences etc. throughout the world in last couple of decades and it has carved out a space for itself like any other disciplines of basic science and engineering. Computer Application is a discipline that spans theory and practice and it requires thinking both in abstract terms and in concrete terms. Nowadays, practically everyone is a computer user, and many people are evencomputerprogrammers.ComputerApplicationcanbeseenonahigherlevel,as a science of problem solving and problem solving requires precision, creativity, and careful reasoning.

The ever-evolving discipline of computer Application also has strong connections to other disciplines. Many problems in science, engineering, healthcare, business, and other areas can be solved effectively with computers, but finding a solution requires both computer science expertise and knowledge of the particular application domain. Cyber security has a wide range of specialties. These include Computer Architecture, Software Systems, Graphics, Artificial Intelligence, Computational Science, and Software Engineering. Drawing from a common core of computer science knowledge, each specialty are a focuses on specific challenges. Computer Science Cyber security is practiced by mathematicians, scientists and engineers. Mathematics, the origins of Computer Science, provides reason and logic.

Science provides the methodology for learning and refinement. Engineering provides the techniques for building hardware and software.

Programme Outcome, Programme Specific Outcome and Course Outcome

Computer Science is the study of quantity, structure, space and change, focusing on problem solving, application development with wider scope of application in science, engineering, technology, social sciences etc. The key core area so for study in Mathematics include Algebra, Analysis (Real &Complex), Differential Equations, Geometry, and Mechanics.

The Students completing this programme will be able to present Cyber security clearly and precisely, make abstract ideas precise by formulating the min the Computer languages. Completion of this programme will also enable the learners to join teaching profession, enhance their employability for government jobs, jobs in software industry, banking, insurance and investment sectors, data analyst jobs and jobs in various other public and private enterprises.

LEARNING OUT	COMES-BASED CURRICULUM FRAMEWORK GUIDELINESBASED
	REGULATIONS FOR UNDER GRADUATE PROGRAMME
Programme:	U.G.
Programme Code:	
Duration:	3 years [UG]
Programme Outcomes:	
	knowledge and understanding of one or more disciplines that form a
	part of an undergraduate Programme of study.
	PO2: Communication Skills: Ability to express thoughts and ideas
	effectively in writing and orally; Communicate with others using
	appropriate media; confidently share one's views and express
	herself/himself; demonstrate the ability to listen carefully, read and
	write analytically, and present complex information in a clear and
	concise manner to different groups.
	PO3: Critical thinking: Capability to apply analytic thought to a body of
	knowledge; analyze and evaluate evidence, arguments, claims, beliefs
	on the basis of empirical evidence; identify relevant assumptions or implications; formulate coherent arguments; critically evaluate
	practices, policies and theories by following scientific approach to
	knowledge development.
	PO4: Problem solving: Capacity to extrapolate from what one has learned
	and apply their competencies to solve different kinds of non-familiar
	problems, rather than replicate curriculum content knowledge; and
	apply one's learning to real life situations.
	PO5: Analytical reasoning : Ability to evaluate the reliability and relevance
	of evidence; identify logical flaws and holesin the arguments of others;
	analyze and synthesize data from a variety of sources; draw valid
	conclusions and support them with evidence and examples, and
	addressing opposing viewpoints.
	PO6: Research-related skills: A sense of inquiry and capability for asking
	relevant/appropriate questions, problem arising, synthesizing and
	articulating; Ability to recognize cause-and-effect relationships, define
	problems, formulate hypotheses, test hypotheses, analyse, interpret and
	draw conclusions from data, establish hypotheses, predict cause-and-effect
	relationships; ability to plan, execute and report the results of an
	experiment or investigation.
	PO7: Cooperation/Team work: Ability to work effectively and respectfully
	with diverse teams; facilitate cooperative or coordinated effort on the
	part of a group, and act together as a group or a team in the interests of a
	common cause and work efficiently as a member of a team.
	PO8: Scientific reasoning : Ability to analyse, interpret and draw conclusions from quantitative/qualitative data; and critically evaluate ideas, evidence
	and experiences from an open-minded and reasoned perspective.
	PO9: Reflective thinking: Critical sensibility to lived experiences, with self
	awareness and reflexivity of both self and society.
	PO10 Information/digital literacy: Capability to use ICT in a variety of
	learning situations, demonstrate ability to access, evaluate, and use a
	variety of relevant information sources; and use appropriate software for
	analysis of data.
	anary 010 O1 data.

- **PO11 Self-directed learning**: Ability to work independently, identify appropriate resources required for a project, and manage a project through to completion.
- **PO12 Multicultural competence:** Possess knowledge of the values and beliefs of multiple cultures and a global perspective; and capability to effectively engage in a multicultural society and interact respectfully with diverse groups.
- PO13: Moral and ethical awareness/reasoning: Ability to embrace moral/ethical values in conducting one's life, formulate a position/argument about an ethical issue from multiple perspectives, and use ethical practices in all work. Capable of demonstrating the ability to identify ethical issues related to one's work, avoid unethical behavior such as fabrication, falsification or misrepresentation of data or committing plagiarism, not adhering to intellectual property rights; appreciating environmental and sustainability issues; and adopting objective, unbiased and truthful actions in all aspects of work.
- **PO 14: Leadership readiness/qualities:** Capability for mapping out the tasks of a team or an organization, and setting direction, formulating an inspiring vision, building a team who can help achieve the vision, motivating and inspiring team members to engage with that vision, and using management skills to guide people to the right destination, in a smooth and efficient way.
- **PO 15: Lifelong learning:** Ability to acquire knowledge and skills, including learning how to learn that are necessary for participating in learning activities throughout life, through self-paced and self-directed learning aimed at personal development, meeting economic, social and cultural objectives, and adapting to changing trades and demands of work place through knowledge/skill development/reskilling.

Programme Specific Outcomes:

- **PSO1**: To enable students to apply basic microeconomic, macroeconomic and monetary concepts and theories in real life and decision making.
- **PSO 2**: To sensitize students to various economic issues related to Development, Growth, International Economics, Sustainable Development and Environment.
- **PSO 3**: To familiarize students to the concepts and theories related to Finance, Investments and Modern Marketing.
- **PSO 4**: Evaluate various social and economic problems in the society and develop answer to the problems as global citizens.
- **PSO 5:** Enhance skills of analytical and critical thinking to analyze effectiveness of economic policies.

	PO 1	PO2	PO3	PO4	PO5	PO6	PO7	PO8

PSO 5	Y	Y	Y	Y	Y	Y	Y	Y

Highlights of the Revamped Curriculum:

- ➤ Student-centric, meeting the demands of industry & society, incorporating industrial components, hands-on training, skill enhancement modules, industrial project, project with viva-voce, exposure to entrepreneurial skills, training for competitive examinations, sustaining the quality of the core components and incorporating application oriented content wherever required.
- ➤ The Core subjects include latest developments in the education and scientific front, advanced programming packages allied with the discipline topics, practical training, devising mathematical models and algorithms for providing solutions to industry / real life situations. The curriculum also facilitates peer learning with advanced mathematical topics in the final semester, catering to the needs of stakeholders with research aptitude.
- ➤ The General Studies and Mathematics based problem solving skills are included as mandatory components in the _Training for Competitive Examinations' course at the final semester, a first of its kind.
- The curriculum is designed so as to strengthen the Industry-Academia interface and provide more job opportunities for the students.
- ➤ The Industrial Statistics course is newly introduced in the fourth semester, to expose the students to real life problems and train the students on designing a mathematical model to provide solutions to the industrial problems.
- ➤ The Internship during the second year vacation will help the students gain valuable work experience that connects classroom knowledge to real world experience and to narrow down and focus on the career path.
- Project with viva-voce component in the fifth semester enables the student, application of conceptual knowledge to practical situations. The state of art technologies in conducting a Explain in a scientific and systematic way and arriving at a precise solution is ensured. Such innovative provisions of the industrial training, project and internships will give students an edge over the counterparts in the job market.
- ➤ State-of Art techniques from the streams of multi-disciplinary, cross disciplinary and inter disciplinary nature are incorporated as Elective courses, covering conventional topics to the latest Cyber Security.

Value additions in the Revamped Curriculum:

Semester	Newly introduced	Outcome / Benefits
	Components	
I	Foundation Course To ease the transition of learning from higher secondary to higher education, providing an overview of the pedagogy of learning abstract Mathematics and simulating	 Instil confidence among students Create interest for the subject
	mathematical concepts to real world.	
	Skill Enhancement papers (Discipline centric / Generic / Entrepreneurial)	 Industry ready graduates Skilled human resource Students are equipped with essential skills to make them employable Training on Computing / Computational skills enable the students gain knowledge and exposure on latest
I, II, III, IV		computational aspects • Data analytical skills will enable students gain internships, apprentice ships, field work involving data collection, compilation, analysis etc.
		 Entrepreneurial skill training will provide an opportunity for independent lively hood Generates self – employment Create small scale entrepreneurs Training to girls leads to women empowerment
		Discipline centric skill will improve the Technical knowhowof solving real life problems using ICT tools
111 15 7 57	Elective papers- An open choice of topics categorized under Generic and Discipline Centric	 Strengthening the domain knowledge Introducing the stakeholders to the State-of Art techniques from the streams of multi- disciplinary, cross disciplinary and inter disciplinary nature
III, IV, V & VI		Students are exposed to Latest topics on Computer Science / IT, that require strong mathematical background
		Emerging topics in higher education/ industry / communication network/ health

		sector etc. are introduced with hands-on- training, facilitates designing of mathematical models in the respective sectors
IV	Industrial Statistics	 Exposure to industry moulds students into solution providers Generates Industry ready graduates Employment opportunities enhanced
IV	Internship / Industrial Training	Practical training at the Industry Banking Sector / Private/ Public sector organizations / Educational institutions enable the students gain professional experience and also become responsible citizens.
V	Project with Viva – voce	 Self-learning is enhanced Application of the concept to real situation is conceived resulting intangible outcome
VI	Introduction of Professional Competency component	 Curriculum design accommodates all category of learners; Mathematics for Advanced Explain component will comprise of advanced topics in Mathematics and allied fields, for those in the peer group / aspiring researchers; Training for Competitive Examinations—caters to the needs of the aspirants towards most sought- after services of the nation viz, UPSC, CDS, NDA, Banking Services, CAT, TNPSC group services, etc.
Extra Cro For Adva	edits: nced Learners / Honors degree	To cater to the needs of peer learners research aspirants

	Course Outcomes
CO1	Outline the fundamental concepts of C programming languages, andits features
CO2	Demonstrate the programming methodology.
CO3	Identify suitable programming constructs for problem solving.
CO4	Select the appropriate data representation, control structures, functions and concepts based on the problem requirement.
CO5	Evaluate the program performance by fixing the errors.

- 2. Programs on conditional structures
- 3. Command Line Arguments
- 4. Programs using Arrays
- 5. String Manipulations
- 6. Programs using Functions
- 7. Recursive Functions
- 8. Programs using Pointers
- 9. Files
- 10. Programs using Structures & Unions

TOTAL 60

CO	Course Outcomes
CO1	Demonstrate the understanding of syntax and semantics of C programs.
CO2	Identify the problem and solve using C programming techniques.
CO3	Identify suitable programming constructs for problem solving.
CO4	Analyze various concepts of C language to solve the problem in an efficient way.
CO5	Develop a C program for a given problem and test for its correctness.

# **Learning Objectives:**

- 1. To explain basic database concepts, applications, data models, schemasandinstances.
- 2. To demonstrate the use of constraints and relational algebra operations
- 3. Describe the basics of SQL and construct queries using SQL.
- 4. To emphasize the importance of normalization in databases
- 5. To facilitate students in Database design

#### LAB EXERCISES:

#### **SOL:**

- 1. DDL commands.
- 2. Specifying constraints-Primary Key, Foreign Key, Unique, Check, Not Null.
- 3. DML commands.
- 4. Set Operations.
- 5. Joins.
- 6. Sub-queries.

#### PL/SOL:

- 7. Control Constructs.
- 8. Exception Handlers.
- 9. Implicit Cursor.
- 10. Explicit Cursor.
- 11. Procedures.
- 12. Functions.
- 13. Triggers.
- 14. TCL Commands usage (Commit, Rollback, Savepoint)

**TOTAL HOURS: 60** 

	Course Outcomes								
СО	On completion of this course, students will								
CO1	To demonstrate the characteristics of Database Management Systems.  To study about the concepts and models of database.  To impart the concepts of System Development Life Cycle and E-R Model.								
CO2	To classify the keys and the concepts of Relational Algebra. To impart the applications of various Normal Forms Classification of Dependency.								
CO3	To elaborate the different types of Functions and Joins and their applications. Introduction of Views, Sequence, Index and Procedure.								
CO4	Representation of PL-SQL Structure.  To impart the knowledge of Sub Programs, Functions and Procedures.  Representation of Exception and Pre-Defined Exception.								
CO5	To Point out the Importance of Triggers, Implicit and Explicit Cursors.

#### **Learning Objectives:**

- 1. Understanding the basics of computer security and common vulnerabilities.
- 2. Learning how to conduct a thorough vulnerability assessment and penetration testing.
- 3. Familiarizing with various tools used for ethical hacking and their usage.
- 4. Developing an understanding of the laws and regulations governing ethical hacking.
- 5. Gaining knowledge of how to report and document findings from ethical hacking tests

#### LAB EXERCISES:

- 1. Use Google and Whois for REconnaisasance.
- 2. Use CryptTool to encrypt and decrypt passwords.
- 3. Using TraceRoute, Ping, if config, netstat command
- 4. Using Nmap scanner to perform port scanning of various forms ACK,SYN,FIN,NULL, XMAS
- 5. Use WireShark sniffer to capture network traffic and analyse
- 6. Simulate persistent cross site scripting attack
- 7. Session impersonation using Firefox and Tamper data add-on
- 8. Perform SQL injection attack.
- 9. Using Metaspoilt to exploit

**TOTAL HOURS: 60** 

	Course Outcomes								
CO	On completion of this course, students will								
CO1	A comprehensive understanding of the principles and concepts of ethical hacking.								
CO2	Proficiency in identifying and exploiting common vulnerabilities in computer systems and networks.								
CO3	Knowledge of various tools and techniques used for ethical hacking.								
CO4	An understanding of how to conduct a vulnerability assessment and penetration testing.								
CO5	Familiarity with the legal and ethical considerations surrounding ethical hacking.

I	Introduction-WLAN Technologies: Infrared, UHF Narrowband,Spread Spectrum -IEEE802.11: System Architecture, Protocol Architecture, Physical Layer, MAC Layer, 802.11b, 802.11a – Hiper LAN: WATM, BRAN, HiperLAN2 – Bluetooth: Architecture, Radio Layer, Baseband Layer, Link Manager Protocol, Security – IEEE802.16-WIMAX: Physical Layer, MAC, Spectrum Allocation For WIMAX.								1	15

II Introduction – Mobile IP: IP Packet Delivery, Agent Discovery, Tunneling And Encapsulation, IPV6-Network Layer In The Internet- Mobile IP Session Initiation Protocol – Mobile Ad-Hoc Network: Routing, Destination Sequence Distance Vector, Dynamic Source Routing.							
III	TCP Enhancements For Wireless Protocols – Traditional TCP: Congestion Control, Fast Retransmit/Fast Recovery, Implications Of Mobility – Classical TCP Improvements:Indirect TCP, Snooping TCP, Mobile TCP, Time Out Freezing,Selective Retransmission, Transaction Oriented TCP – TCP Over 3G Wireless	c	15				
	Networks.	3					
IV Overview Of UTMS Terrestrial Radio Access Network-UMTS Core Network Architecture: 3G-MSC, 3G-SGSN, 3G-GGSN, SMS-GMSC/SMS-IWMSC, Firewall, DNS/DHCP-High SpeedDownlink Packet Access (HSDPA) - LTE Network Architecture And Protocol.

	Course Outcomes	Programme Outcomes				
CO	On completion of this course, students will	<u> </u>				
CO1	Learn the basics of computer, Construct the structure of the required things in computer, learn how to use it.	PO1, PO2, PO3, PO4, PO5, PO6				
CO2	Develop organizational structure using for the devices present currently under input or output unit.					
CO3 Concept of storing data in computer using two header namely RAM and ROM with different types of ROM with advancement in storage basis.						
CO4	Work with different software, Write program in the software and applications of software.					
CO5	Usage of Operating system in information technology which really acts as a interpreter between software and hardware.

LO4	Create pivot tables to consolidate data from multiple files											
LO5	Presenting data in the form of o	charts and gr	aphs									

UNIT	Contents	No. of Hours
I	Basics of Excel- Customizing common options- Absolute and relative cells- Protecting and un-protecting worksheets	
	and cells- Working with Functions - Writing conditional	
	expressions - logical functions - lookup and reference	6
	functions- VlookUP with Exact Match, Approximate	
	Match- Nested VlookUP with Exact Match- VlookUP with	
	Tables, Dynamic Ranges- Nested VlookUP with Exact	
	Match- Using VLookUP to consolidate Data from Multiple	
	Sheets	
II	Data Validations - Specifying a valid range of values -	
	Specifying a list of valid values- Specifying custom	
	validations based on formula - Working with Templates	
	Designing the structure of a template- templates for	
	standardization of worksheets - Sorting and Filtering Data -	6
	Sorting tables- multiple-level sorting- custom sorting-	
	Filtering data for selected view - advanced filter options-	
	Working with Reports Creating subtotals- Multiple-level	
	subtotal.	
III	Creating Pivot tables Formatting and customizing Pivot	
	tables- advanced options of Pivot tables- Pivot charts-	
	Consolidating data from multiple sheets and files using	
	Pivot tables- external data sources- data consolidation	6
	feature to consolidate data- Show Value As % of Row, %	
	of Column, Running Total, Compare with Specific Field-	
	Viewing Subtotal under Pivot- Creating Slicers.	
IV	More Functions Date and time functions- Text functions-	
	Database functions- Power Functions - Formatting Using	
	auto formatting option for worksheets- Using conditional	6
	formatting option for rows, columns and cells- What If	
	Analysis - Goal Seek- Data Tables- Scenario Manager.	
V	Charts - Formatting Charts- 3D Graphs- Bar and Line	6

	Chart together- Secondary Axis in Graphs- Sharing Charts	
	with PowerPoint / MS Word, Dynamically- New Features	
	Of Excel Sparklines, Inline Charts, data Charts- Overview	
	of all the new features.	
	Total	30

UNIT	contents	No. of Hours
I	Introduction: What is Biometrics, History, Types of biometric Traits, General architecture of biometric systems, Basic working of biometric matching, Biometric system error and performance measures, Design of biometric system, Applications of biometrics, Biometrics versus traditional authentication methods.  Face Biometrics: Introduction, Background of Face Recognition, Design of Face Recognition System,  Neural Network for Face Recognition, Face Detection in Video Sequences, Challenges in Face Biometrics, .7 Face Recognition Methods, Advantages and Disadvantages.	6
II	Retina and Iris Biometrics: Introduction, Performance of Biometrics, Design of Retina Biometrics, Design of Iris Recognition System, Iris Segmentation Method, Determination of Iris Region, Determination of Iris Region, Applications of Iris Biometrics, Advantages and Disadvantages  Vein and Fingerprint Biometrics: Introduction, Biometrics Using Vein Pattern of Palm, Fingerprint Biometrics, Fingerprint Recognition System, Minutiae Extraction, Fingerprint Indexing, Experimental Results, Advantages and Disadvantages.	6
III	Privacy Enhancement Using Biometrics: Introduction, Privacy Concerns Associated with Biometric Deployments, Identity and Privacy, Privacy Concerns, Biometrics with Privacy Enhancement, Comparison of Various Biometrics in Terms of Privacy, Soft Biometrics.  Multimodal Biometrics: Introduction to Multimodal Biometrics, Basic Architecture of Multimodal Biometrics, Multimodal Biometrics Using Face and Ear, Characteristics and Advantages of Multimodal Biometrics, Characteristics and Advantages of Multimodal Biometrics.	6

IV	Watermarking Techniques: Introduction, Data Hiding Methods, Basic Framework of Watermarking, Classification of Watermarking, Applications of Watermarking, Attacks on Watermarks, Performance Evaluation, Characteristics of Watermarks, General Watermarking Process, Image Watermarking Techniques, Watermarking Algorithm, Experimental Results, Effect of Attacks on Watermarking Techniques, Attacks on Spatial Domain Watermarking.	6
V	Scope and Future: Scope and Future Market of Biometrics, Biometric Technologies, Applications of Biometrics, Biometrics and Information Technology Infrastructure, Role of Biometrics in Enterprise Security, Role of Biometrics in Border Security, Smart Card Technology and Biometrics, Radio Frequency Identification (RFID) Biometrics, DNA Biometrics, Comparative Study of Various Biometric Techniques.	6
	Biometric Standards: Introduction, Standard Development Organizations, Application Programming Interface (API), Information Security and Biometric Standards, Biometric Template Interoperability.

	Learn	ing Objectiv	es	<u> </u>	l	1		1		1	
LO1	Generates computer simulation technologies and techniques, lays the groundwork for students to comprehend computer simulation requirements, and implements and tests a variety of simulation and data analysis libraries and programmes. This course focuses on what is required to create simulation software environments rather than just simulations using pre-existing packages										
LO2	Discuss the concepts of modelling layers of critical infrastructure networks in society.										
LO3	Create tools for viewing and controlling simulations and their results.										
LO4	Understand the concept of Entity modelling, Path planning										
LO5	To learn about the Algorithms and Modelling.

UNIT	Contents									of Ho	ours
I	INTRODUCTION: Concept of Organizational Behavior (OB): Nature, Scope and Role of OB: Disciplines that contribute to OB; Opportunities for OB (Globalization, Indian workforce diversity, customer service, innovation and change, networked organizations, work-life balance, people skills, positive work environment, ethics)								6		
INDIVIDUAL BEHAVIOUR:  1. Learning, attitude and Job satisfaction: Concept of learning, conditioning, shaping and reinforcement. Concept of attitude, components, behavior and attitude. Job satisfaction: causation; impact of satisfied employees on workplace.  2. Motivation: Concept; Theories (Hierarchy of needs, X and Y, Two factor, McClelland, Goal setting, Self-efficacy, Equity theory); Job characteristics model; Redesigning jobs,  3. Personality and Values: Concept of personality; Myers-Briggs Type Indicator (MBTI); Big Five model. Relevance of values; Linking personality and values to the workplace (person-job fit, person-organization fit)  4. Perception, Decision Making: Perception and Judgements;								e, an; Y, aty sgs ss; at,		6	
III	GROUP BEHAVIOUR Five Stage model of cohesiveness; Group the Creating team players from 2. Leadership: Concept; and Michigan studies); General Blanchard, Path-Goal);	: 1. Groups and Wo f group developm nink and shift; Te m individuals and tea Trait theories; Beha	ork 7 nent; ams um b	Γear G; ty] ased	ns : broupes l wo	Co p of ork(	norm team TBW	s, s; o		6	

IV	ORGANISATIONAL CULTURE AND STRUCTURE: Concept of culture; Impact (functions and liability); Creating and sustaining culture: Concept of structure, Prevalent organizational designs: New design options	6			
V	ORGANISATIONAL CHANGE, CONFLICT AND POWER: Forces of change; Planned change; Resistance; Approaches (Lewin's model, Organisational development);. Concept of conflict, Conflict process; Types, Functional/ Dysfunctional. Introduction to power and politics.	6

## **Course Objectives:**

- 1. Be able to design and program Python applications.
- 2. Be able to create loops and decision statements in Python.
- 3. Be able to work with functions and pass arguments in Python.
- 4. Be able to build and package Python modules for reusability.
- 5. Be able to read and write files in Python.

	Do do to read and write mes mr y mon.	
	LAB EXERCISES	Required Hours
1.	Program using variables, constants, I/O statements in Python.	60
2.	Program using Operators in Python.	
3.	Program using Conditional Statements.	
4.	Program using Loops.	
5.	Program using Jump Statements.	
6.	Program using Functions.	
7.	Program using Recursion.	
8.	Program using Arrays.	
9.	Program using Strings.	
10.	Program using Modules.	
11.	Program using Lists.	
12.	Program using Tuples.	
13.	Program using Dictionaries.	
14.	Program for File Handling.	
	Course Outcomes	-
	On completion of this course, students will	
CO1	Demonstrate the understanding of syntax and semantics of	
CO2	Identify the problem and solve using PYTHON programming tech	niques.
	Identify suitable programming constructs for problem solving.	

CO3	
	Analyze various concepts of PYTHON language to solve the problem in an efficient
CO4	way.
CO5	Develop a PYTHON program for a given problem and test for its correctness.

## **OBJECTIVES:**

To build websites and software, automate tasks, and conduct data analysis. Open Source and Community Development.

Required	
Hours	

#### LIST OF PROGRAMS

- 1. Demonstrate the working of -idl and -typel functions.
- 2. Find all prime numbers within a given range.
- 3. Print n terms of Fibonacci series using iteration.
- 4. Demonstrate use of slicing in string.
- 5. Compute the frequency of the words from the input. The output should output after sorting the key alphanumerically.
- 6. Write a program that accepts a comma separated sequence of words as input and prints the words in a comma-separated sequence after sorting them alphabetically.
- 7. Demonstrate use of list & related functions.
- 8. Demonstrate use of Dictionary & related functions.
- 9. Demonstrate use of tuple & related functions.
- 10. Implement stack using list.
- 11. Implement queue using list.
- 12. Read and write from a file.
- 13. Copy a file.
- 14. Demonstrate working of classes and objects.
- 15. Demonstrate class method & static method.
- 16. Demonstrate constructors.
- 17. Demonstrate inheritance.
- 18. Demonstrate aggregation/composition.
- 19. Create a small GUI application for insert, update and delete in a table.
- 20. Bar charts, histograms and pie charts

#### **Mapping with Programme Outcomes:**

LO3	LO3 Learn to write test cases using different testing techniques.														
List of Exercises															

# Do the following 8 exercises for any project projects (Eg. Student Portal, Online exam registration)

- 1) Development of problem statement.
- 2) Preparation of Software Requirement Specification Document.
- 3) Preparation of Software Configuration Management and Risk Management related documents.
- 4) Draw the entity relationship diagram
- 5) Draw the data flow diagrams at level 0 and level 1
- 6) Draw use case diagram
- 7) Draw activity diagram of all use cases.
- 8) Performing the Design by using any Design phase CASE tools.
- 9) Develop test cases for unit testing and integration testing
- 10) Develop test cases for various white box and black box testing techniques

	TOTAL 7:	5
CO	Course Outcomes	
CO1	An ability to use the methodology and tools necessary for engineering practice.	
CO2	Ability to elicit, analyze and specify software requirements.	
CO3	Analyze and translate specifications into a design.	
CO4	Ability to derive test cases for different testing.	
CO5	Apply software engineering perspective through requirements analysis, software design and construction, verification, and validation to develop solutions to modern problems
