PERIYAR UNIVERSITY Salem-636011

(NAAC A Grade - State University - NIRF Rank 68)

DEPARTMENT OF MICROBIOLOGY

M.Sc., DEGREE
[Choice Based Credit System (CBCS)]

OBE REGULATIONS AND SYLLABUS

(Effective from the academic year 2019-2020 and thereafter)

M.Sc., Microbiology

OBE REGULATIONS AND SYLLABUS

(With effect from the academic year 2019-2020 onwards)

Preamble

Post graduate Microbiology is a course focus on microbiology and its complete diversity exploring their relationship with various environments. Curriculum includes Basics of Microbiology, Immunology & Immunotechnology, Pharmaceutical Biochemistry, Medical Bacteriology and Parasitology, Medical Mycology and Virology, Bioresource Technology, Molecular Biology and Applied Biotechnology, Bio Nano-technology and Infectomics, and Research Methodology and Computational Biology. M.Sc., Microbiology program designed by integrating the knowledge of cutting edge technologies like omics technologies and recombinant technologies for the heterologous expression allowing the generation of new and improved products and services in microbiology. It is envisaged to produce competitive graduates with a great spectrum of proficiency, interdisciplinary focus at par with international qualification. The detailed syllabus for each paper is constructed to inculcate the graduate with outcome based education pattern which provide space for Knowledge, Comprehension, Application, Analysis, Synthesis and Evaluation (K1 –K6).

1. General Graduate Attributes:

Communication skills:

The students gain the ability to accurately and effectively communicate information on microbiology using written, visual and oral reporting formats.

***** Research related skills:

The students thinking ability increases with the ability to apply the principles of scientific experimental design and methods to investigate microbiologically relevant problems. They may gain the ability to analyse critique scientific papers in microbiologically relevant research areas.

***** Team work:

The postgraduates acquires the ability to work effectively as a member and leader within a team. They are capable to employ the scientific method effectively as part of a collaborative team. And understands the role of network building in career development and has the ability to interact effectively with people from a wide range of backgrounds.

***** Knowledge:

The students will gains integrated knowledge on various scientific disciplines such as, microbiology, Immunology & Immunotechnology, Pharmaceutical Biochemistry, Medical Bacteriology and Parasitology, Medical Mycology and Virology, Molecular Biology and Applied Biotechnology, Bio Nano-technology and Infectomics, Food, Soil and Environmental Microbiology Research Methodology and Computational biology.

Global Perspective:

The graduates may acquire the current and emerging worldwide microbiological technologies, issues, and perspectives during their course period.

***** Critical thinking:

The graduates sustains the skill to apply the scientific process, including ability to acquire, assimilate, synthesize, analyze and critique microbiological information.

Problem solving:

The postgraduate students will have the attitude to evaluate and solve the problems with scientific evidences.

Analytical reasoning:

The students were enhanced in logical reasoning, critical data evaluation and formation of evidence-based opinions.

Scientific reasoning:

The students gain demonstrative understanding and evaluation of knowledge as the key to knowledge creation. An intellectual integrity, rigour, reasoning, analysis and interpretation of scientific and technical data.

***** Reflective thinking:

The student potential in self-discipline, planning, organizational and time management skills and the ability to work independently will be enhanced.

❖ Digital literacy:

The data analysis ability to apply specific skills in acquiring, organizing, analyzing, evaluating and presenting microbiological information, in particular incorporating the increasing importance of digital-based activity.

***** Multicultural competence:

The students acquire an awareness of and appreciation for, the social and cultural context of the implications of microbiology and microbiological knowledge and investigation.

2. Programme Specific Qualification Attributes

Programme specific qualification attributes achieved through courses in the programme in terms of

- Knowledge and understanding level (K1 and K2)
- Application level (K3)
- Analytical level (K4)
- Evaluation capability level (K5)
- Scientific or synthesis level (K6)

1. Vision

Aspires to be a reference center for microbiology, committed to an academic excellence and to attain the national and international recognition for the quality of its education, research, and service activities in agriculture, medical and public health

2. Programme objectives and outcomes

PROGRAM EDUCATIONAL OBJECTIVES (PEOS):

PEO1 – To enable the post graduates to develop knowledge and skills in solving challenges in the field of Microbiology.

PE02 – To ensure that graduates will recognize, design and develop sustainable technologies to address the needs of community and expand the career opportunities in academic institute's hospitals / clinical laboratories, food industry, effluent treatment plants, research laboratories and pharmaceutical industry through innovative techniques.

PEO3 – To empower the graduates to develop leadership skills, decision making and serve with societal and ethical responsibilities.

PROGRAMME OUTCOME (POs)

PO1: Gains integrated knowledge on microbiology, Immunology & Immunotechnology, Pharmaceutical Biochemistry, Medical Bacteriology and Parasitology, Medical Mycology and Virology, Molecular Biology and Applied Biotechnology, Bio Nano-technology and Infectomics, Food, Soil and Environmental Microbiology Research Methodology and Computational biology.

PO2: Gains awareness of current and emerging worldwide microbiological technologies, issues, and perspectives.

PO3: Gains the ability to accurately and effectively communicate information on microbiology using written, visual and oral reporting formats.

PO4: Gains the ability to apply the scientific process, including ability to acquire, assimilate, synthesize, analyze and critique microbiological information.

PO5: Gains the ability to evaluate and solve the problems with scientific evidences.

PO6: Develops logical reasoning, critical data evaluation and formation of evidence-based opinions.

PO7: Gain an understanding of and the ability to apply the principles of scientific experimental design and methods to investigate microbiologically relevant problems. An ability to critique scientific papers in microbiologically relevant research areas.

PO8: Gain an ability to work effectively as a member and leader within a team. To be able to employ the scientific method effectively as part of a collaborative team. To understands the role of network building in career development and has the ability to interact effectively with people from a wide range of backgrounds.

PO9: Apply the gained knowledge as the key to knowledge creation. An intellectual integrity, rigour, reasoning, analysis and interpretation of scientific and technical data.

PO10: Recognize the need for planning, organizational and time management skills and the ability to work independently.

PO11: Demonstrate specific skills in analyzing, evaluating and presenting microbiological information, in particular incorporating the increasing importance of digital-based activity.

PO12: Gains an awareness of and appreciation for, the social and cultural context of the implications of microbiology and microbiological knowledge and investigation.

PROGRAMME SPECIFIC OUTCOMES (PSOs):

PSO1: The Graduates will able to work independently on lab protocols involving immunotechniques, identification of unknown pathogens, molecular techniques and biotechnological techniques.

PSO2: Design experiments to prove scientific process and to synthesize product / services for the benefit of community.

PSO3: Microbiologist usually works in hospitals/ clinical laboratories, food industry, environment, research laboratories, pharmaceutical industry and will able to understand industrial processes, cleanrooms, and how to effectively evaluate microbial risks to products from people and processes.

3. Candidate's eligibility for admission

Candidate who has passed the B.Sc. degree in any Life Sciences [Microbiology/ Applied Microbiology/ Industrial Microbiology/ Botany/ Plant Sciences and Plant Biotechnology/ Zoology/ Biochemistry/ Bioinformatics/ Biology/Chemistry with Botany/ Zoology as Allied Subjects] of this university or an examination of any other university accepted by the syndicate as equivalent thereto shall be eligible for admission to M.Sc. Degree Course in Microbiology.

4. Duration of the programme

The duration of the course is for two academic years consisting of four semesters.

5. CBCS- Structure of the programme

The programme structure comprises of two parts.

Course Component	No. of	Hours of Learning	Marks	Credits									
	courses												
	Part A (Credit Courses)												
Core courses	16	75	100	5									
Elective courses	2	60	100	4									
Supportive courses	2	45	100	4									
Research	-	-	-	-									
Online courses	2			4									
Total													
Par	rt B (Self-	Learning Credit Cou	rses)										
Elective Foundation	2			2									
courses													
Total	24	180	300	19									

6. Curriculum structure for each semester as per your courses alignment

Compaton	Paper	Course	Hrs/	Credits	Marks

	18MBCPR01	Project	24	4	40	60	100	
		Total		94	725	1575	2300	

Elective courses

- 1. Biocontrol and Entomology
- 2. Entrepreneurship in Microbiology
- 3. Algal Biotechnology
- 4. Quality Control in Industries
- 5. IPR, Biosafety and Bioethics

Supportive courses for other departments

- 1. Medical Laboratory Technology
- 2. Microbiology
- 3. Health Science Management
- 4. Quality Control in Industries

7. Credit Calculation

Method of teaching	Hours	Credits
Lecture	1	1
Tutorial/Demonstration	1	1
Practical/Internship/Self-Learning	2	1

8. Examinations

There shall be four semester examinations: first semester examinations at the middle of the first academic year and the second semester examination at the end of the first academic year. Similarly, the third and fourth semester examinations shall be held at the middle and end of the second academic year, respectively.

9. Scheme for Evaluation and Attainment Rubrics

Evaluation will be done on a continuous basis and will be evaluated four times during the course work. The first evaluation will be in the 7th week, the second in the 11th week, third in the 16th week and the end- semester examination in the 19th week. Evaluation may be by objective type questions, short answers, essays or a combination of these, but the end semester examination is a University theory examination with prescribed question paper pattern.

Attainment Rubrics for Theory Courses

External : 75 Marks
Internal : 25 Marks
Total : 100 Marks

Time : 3 hours

The following procedure will be followed for Internal Marks:

Theory Papers Internal

Best two tests out of 3 : 10 marks

Attendance : 5 marks

Seminar : 5 marks

Assignment : 5 marks

25 marks

Question Paper Pattern (Theory)

Section	Approaches	Mark Pattern	K Level	CO coverage
A	One word (Answer all questions)	20X1=20 (Multiple choice questions)		
В	100 to 200 words (Answer any three out of five questions)	3X5=15 (Analytical type questions)		
С	500 to 1000 words	5X8=40 (Essay type questions)		

Attainment Rubrics for Lab courses

Practical : 40 Internal Marks

Attendance : 5 marks
Practical Test : 30 marks

(Best 2 out of 3)

Record : 5 marks

Attainment Rubrics for Research

Project

Internal Mark : 20 marks Viva - voce : 20 marks Project Report : 60 marks

10.Grading System

Evaluation of performance of students is based on ten-point scale grading system as given below.

	Ten Point Scale											
Grade of Marks	Grade points	Letter Grade	Description									
75 - 100	5.50 - 6.00	О	Outstanding									
65 - 74	4.50 - 5.49	A	Very Good									
55 - 64	3.50 - 4.49	В	Good									
50 - 54	3.00 - 3.49	С	Average									
35 - 49	1.50 - 2.99	D	Below Average									
25 - 34	0.50 - 1.49	Е	Poor									
0 - 24	0.00 - 0.49	F	Fail									
ABSENT	0.0	AAA	ABSENT

BASICS OF MICROBIOLOGY

Course Code: 18MBC01 Hours: L + T + P = C

Marks: 100 4 1 0 5

Course Objectives

The course contents are designed to gain knowledge about the different forms of bacteria, fungi, algae, protozoan's along with the basic principles of microbial taxonomy. The learner will understand about the microbial metabolism and microbes thriving in extreme environments.

Course Outcome

At the end of the course, the learner will be able to

CO1. Know about the basic aspects of microbiology, different methods of isolation of microorganism, preservation and controlling of microorganism.

CO2. Learn the basic morphology of different class of microorganism, its cellular components and the classification of different types of microorganism.

- CO3. Know about the basic aspects of microbial taxonomy, classification systems and the life cycle of important class of microorganisms.
- CO4. Know the basis of microbial physiology with its biochemical pathway and the ecology of the microbes with reference to Extreme Ecosystems.
- CO5.Know the distribution of microorganism, its diversity and the various microbial interactions present in the ecosystem.

Syllabus

Unit	Unit Title	Intende	ed Learning Chapters	Hours of
		(K1, K2)	(K3, K4, K5)	Instruction
I	Introduction to Microbiology	Development of microbiology and the early discoveries Preservation methods of microbes for storage and microscopy studies Culture collections.	Isolation of different types of bacteria – fungi – actinobacteria – cyanobacteria. Sterilization and disinfection – physical and chemical methods for controlling microorganisms	15
II	Morphological types	Gram negative and Gram positive, Cyanobacteria, Archeabacteria and Eubacteria. Ultrastructure of prokaryotic and eukaryotic cells. Fungi: Cell wall - chemical composition and functions, membranes and their functions.	Algae: Structure of algal cells, classification, reproduction, characteristics of Chlorophyta (green algae), Chrysophyta (golden-brown and yellow), Green algae, Diatoms, Euglenophyta (Euglenoids), Rhodophyta (Red algae), Cyanophyta, Xanthophyta, Phaeophyta (Brown algae)	15
III	Microbial taxonomy	Definition, systematics, Nomenclature rules and identification Hierarchical organization and the position of microbes in	Characterization of microorganisms Morphological, physiological and metabolisms. Modern classification of fungi - Ascomycetes(Aspergillus), Deuteromycetes (Candida), Zygomycetes(Mucor),	15

		the living world. Classification systems – Haeckel's three kingdom concept Whittaker's five kingdom concept three domain concept of Carl Woese.	Basidiomycetes(Agaricus), Acrasiomycetes(Dictyostelium), oomycetes (Saproleina) and Myxomycetes (Ceratiomyxa).	
IV	Microbial respiration and fermentative pathway	Respiratory metabolism - Embden Mayer Hoff pathway - ED pathway Glyoxalate pathway - Kreb's cycle ETC - oxidative and substrate level phosphorylation -TCA cycle gluconeogenesis	Fermentation of carbohydrates - homo and hetero lactic fermentation. Bioenergetics, Cell division - endospore - structure and properties.	15
V	Microbial Ecosystems	Principles of microbial ecology Metabolic diversity - phototrophy, auxotrophy and lithotrophs. Microbial Habitat Nutrient cycles - Nitrogen, Sulphur Phosphorus and Iron, Animal - Microbial symbiosis, Plant - Microbial symbiosis	Microbial ecosystems - Fresh water, soil, plant, hydrothermal vents, hot springs, volcano, Marine (Open oceans and Deep sea organisms), barophiles and space. Microbial communications - Quorum sensing, Cell signaling, Biofilm.	15

CORE - II: IMMUNOLOGY AND IMMUNOTECHNOLOGY

Course Code: 18MBC02 Hours: L + T + P = C

Marks: 100 4 1 0 5

Course Objectives

The course contents are designed to provide students with knowledge on how the immune system works and to state the role of immune system, be able to compare and contrast humoral and cell mediated immune responses, to distinguish and characterize various immune cells, to understand the mechanism of antibody diversity, to understand the role of cytokines in immunity, to understand the significance of the major histocompatibility and to provide an overview of the interaction between the immune system and pathogens.

Course Outcome

At the end of the course, the learner will be able to

- 1. Describe the basic mechanism of innate and acquired immunity; humoral and cell mediated immunity.
- 2. Describe the cellular and molecular mechanism of lymphocyte production and activation.
- 3. Understand the cellular process involved in inflammation and immunity, hypersensitivity reactions.
- 4. Understand the mechanism of clonal selection, antibody diversity and various serological diagnostic techniques based on antigen antibody interaction.

Unit	Unit Title	Intended Learning (Chapters	Hours of
	(K1, K2)		(K3, K4 & K5)	Instruction
I	Immunity & Cells of Immune system	History and scope of immunology; Types of immunity - Innate and acquired, active and passive, Cell mediated immunity and Humoral immunity, Haematopoeisis. Ontogeny, origin, development and differentiation of immune cells. Toll – like receptors Antigen presenting cells. T-helper and T-cytotoxic cells, Natural killer cells, Dendritic cells, Langerhan cells, Macrophages, Microphages.		15
II	Organs of the Immune system and Immune response	Lymphoid tissues and organs - Primary lymphoid organs - Thymus, Bone marrow: Secondary lymphoid organ - Lymph node, spleen, MALT and GALT. Phagocytosis process. Clonal selection theory. B-lymphocytes and their activation, mechanism of	Generation of antibody diversity. Organisation and expression of immunoglob ulin genes.	15

		T-cell activation. Thymus		
		derived lymphocytes, Major histocompatibility		
		complex. Structure and		
		functions of Class I and		
		II molecules.		
III	Antigens and Ag – Ab reaction	Antigenicity: factors governing antigenicity. Antigen types, haptens, epitopes, adjuvants, carriers, bacterial, viral and tumour antigens, autoantigens, blood group antigens, T dependent, T independent antigens. Kinetics of antibody production - primary and secondary antibody response.	Antigen antibody reactions- precipitation , agglutination , immunoflour oscence, haem agglutination , RIA, ELISA. Factors governing antigen- antibody interactions: Affinity, avidity, valency, cross reactivity.	15
IV	Complement system, Transplantatio n and Tumour Immunology	The complement systems: Mode of activation, classical, alternate and lectin pathway; Immuno haematology Introduction to autoimmune disorders and immunology of infectious diseases.	Transplantat ion immunity - Organ transplantati on and HLA tissue typing. Tumour Immunology- Immuno diagnosis and Immunother apy of Cancer	15

CORE - III: PHARMACEUTICAL BIOCHEMISTRY

Course Code: 18MBC03 Hours: L + T + P = C

Marks: 100 4 1 0 5

Course objectives

The course contents are designed to gain basic science knowledge in Chemistry, Microbiology and Pharmaceutical science as prerequisites, needed to understand cell biological functions. The learners will understand the atomic chemistry to explain the role of macromolecules involved in cell activities and also can prepare reagents and buffers of required strength by calculations. applying Learners acquire knowledge about the pharmocokinetic and pharmacological properties of drugs. Gain knowledge to apply Good Laboratory Practices and follow standard guidelines for better maintenance of instruments and keep up quality of finished pharmaceutical products and the experimenting area. Learners fully become prepared for employment within the pharmaceutical and biomedical sciences industries

Course outcome

At the end of the course, learners will be able to

- 1. Able to draw the atomic/molecular structures and sketch out the orbitals and electronic configurations.
- 2. Able to work out molar and millimolar conversions to prepare reagents or buffers of required strength for biological experiments and can balance Stoichiometric equations.
- 3. Able to explain the role of macromolecules in the living systems and can reason out diseases due to vitamin deficiency.
- 4. Able to explain drug biotransformation reactions and drug interactions in living systems.
- 5. Able to list the GLPs and standard guidelines to be followed for better instrument maintenance, environment control, preservation of test records and to keep up quality of finished sterile pharmaceutical products.
- 6. Gain well-rounded knowledge and are fully prepared for employment within the pharmaceutical and biomedical sciences industries.

Unit	Unit Title	Intended Learni	Hours of		
		(K1, K2)	(K3, K4 & K5)	Instruction	
I	Basic concepts in chemistry	Standard periodic table of the chemical elements - Atomic structure: Atom - Atomic orbital - Molecular orbital - Chemical element - Valence - Electron pair - Unpaired electron. Chemical formula - Structural formula. Chemical composition of cells.	Atomic nucleus - Isotope. Bonding: Chemical bond - Ionic bond - Covalent bond - Metallic bond - Hydrogen bond - Intermolecular force - Dipole Mole - Stoichiometry -	15	
II	Macromolecular components of cell	Macromolecul ar components of the cell - Structural conformation and biological functions of macromolecules. Enzyme - Classification, nomenclature, properties and mechanisms of enzyme action. Carbohydrates,	Carbohydrates - Monomers, oligomers, polymers, isomers. Lipids - simple lipids, compound lipids and derived lipids. Lipid beta oxidation. Proteins -	15	

		Lipids, Proteins.	Primary, secondary, tertiary and quaternary structures. Classification and uses of vitamins.	
III	Pharmacokine tics and pharmacodyna mics	Pharmacokine tics and pharmacodynamics - Routes of drug administration- Drug physical and chemical actions - drug interactions - therapeutic applications of beneficial interactions. Adverse drug reactions. Principles of toxicity, evaluation	Volume of distribution - biotransformatio n - Phase I and Phase II reactions - Bioavailability - excretion of drugs and their metabolites as defined by Hendersson Hassle Batch equation. Determination of LD50, ED50 and therapeutic Index.	15
IV	GLPs and SOPs	Current good manufacturing practices, Good laboratory practices, Good documentation practices, Standard operating procedures, HACCP, ISO Standards, Laborator y information management system (LIMS). Pharmacopaea- Pharmacopaea updates, US, Europea, British and Indian Standard Organization, Audit	Instrumentation operating procedures, Calibration of equipment's, Microbial spoilage, Infection risk and contamination control. Chemical disinfectants, antiseptics, antibiotics, anti-infectives,	15

V	Quality controls	related to pharma. United States Federal Drug Administration Audits. Growth promotion test(GPT), Disinfectant efficacy study for different types of Disinfectants, Container Closure Integrity test(CCIT),Preservati ve efficacy study (PET), Qualitative and quantitative methods of environmental monitoring samples, Gowning qualifications, Isolation and identification of isolates - VITEK - Biochemical method, Trend analysis, Results and Discussions	endocrine and human growth hormone and preservatives. Bacterial endotoxin test (BET), Bioburden analysis, Water analysis in pharmaceutics, Biological indicators, Raw material samplings and sterility checking for finished products. Cosmetic microbiologytesting methods and preservation	15

PRACTICAL - I

PRACTICAL EXAM: 7 HRS / DAY: 2 CONSECUTIVE DAYS

PRACTICAL I: GENERAL MICROBIOLOGY

Course Code: 18MBCP01 Hours: L + T + P = C

Marks: 100 0 0 5 4

Course Objectives

The learners will be able to gain adequate knowledge and acquire adequate skill to perform different staining techniques, growth rate of bacteria and biochemical test. To impart thorough knowledge and understanding of practical skills in immunology and means of applying these principles in diagnostic and therapeutic techniques and research.

Course Outcome

At the end of the course, learners will be able to:

CO1. Perform the various staining techniques of bacteria and study the growth rate of

bacteria.

CO2. Competently cultivate algae in different types of media.

CO3. Demonstrate knowledge and understanding of immunology and the means of

applying in the diagnostic and therapeutic techniques and research.

CO4. Understand the safe working practice in an immunology laboratory.

CO5. Develop skills to design diagnostic kits.

Syllabus

Unit	Unit Title	Intended Le	Hours of	
		(K1, K2)	(K3, K4, K5)	Instruction
I	Microscopy	Phase contrast, Dark Field, Fluorescent Microscopy- Principle and Functions. Micrometry		15
II	Staining Techniques		Gram Staining Metachromatic granular Staining Spore Staining Capsule Staining Flagella staining Lactophenol Cotton Blue Staining Motility Test Fungal Slide Culture	15
III	Biochemical Test		IMVIC tests Carbohydrate fermentation Starch hydrolysis Test Cellulose hydrolysis Test Gelatin Hydrolysis Test Casein Hydrolysis Test Catalase Test Oxidase Test Urease Test Nitrate Test Triple Sugar Ion Agar Test	15

IV	Growth of microorganims	Isolation and cultivation of Algae Growth Curve-Growth rate and Generation Time	15
V	Bacterial metabolism	Effect of pH, temperature and osmotic pressure on growth of bacteria. Isolation of Arbuscular mycorrizae (AM) Preparation of Millique water Fumigation technique.	15

SEMESTER - II

Core IV - MEDICAL BACTERIOLOGY AND PARASITOLOGY

Course Code: 18MBC04 Hours: L + T + P = C

Marks: 100 4 1 0 5

Course Objectives

The students will gain knowledge about the different types of bacteria and protozoan. Collection and processing of specimens for microbiological analysis. Virulence factors of bacterial and protozoan pathogens. The mechanism of pathogenesis, laboratory diagnosis and treatment of bacterial and protozoan infections.

Course Outcome

At the end of the course, learners will be able to:

- 1. Able to explain the procedures involved in the collection, transport and processing of clinical specimens
- 2. Can make flow charts and explain about different media preparation, sterilization, inoculation and cultivation.
- 3. Can interpret the results of morphological, biochemical, cultural characteristics of medically important bacteria and protozoans from the given samples to help in their identification.
- 4. Can provide required information on pathogenesis and symptoms of bacterial and protozoan diseases.
- 5. Comprehend the diagnosis of bacteria and protozoan infections and suggest prevention methods.
- 6. Can brief about nosocomial infections and ethical committee.

Uni	Unit Title	Intended Learning Chapters	Hours of	
-----	------------	----------------------------	----------	--

t		(K1, K2)	(K3, K4 & K5)	Instructi on
I	Culturing and Preservation techniques, Normal flora cum Virulence	Microscopic appearance and Colony characteristics of different bacteria. Various Synthetic and Non – synthetic media for bacterial cultivation. Applications of basal, Differential, Enriched and Selective media in bacterial growth.	Maintena nce and preservation techniques – Refrigeration, Freeze drying, Oil overlaying, Periodic transfers. Indigenous normal microbial flora of human system and their importance. Virulence factors of pathogenic bacteria.	15
II	Processing of clinical specimens, Hospital waste management and ethical committee. Gram positive pathogens	' _ 1	waste disposal – Nosocomial	15
III	Gram negative pathogens	Pathogens belonging to the genus - Escherichia, Klebsiella, Proteus, Salmonella, Shigella,	Gram Negative bacteria - The epidemiology, pathogenesis,	15

		Vibrio, Pseudomonas, Neisseria and Zoonotic infections.	symptoms, diagnosis and treatment of infections caused by medically important pathogenic species of bacteria	
IV	Parasitology: Amoeba and Flagellates	Parasitology- introduction and classification. Sarco Mastigophora – Sarcodina - Intestinal amoeba – Entamaeba histolytica. Free living amoebae – Naegleria fowleri, Acanthamoeba spp. Mastigophora – Intestinal and genital flagellates – Giardia, Trichomonas.	Blood and tissue flagellates – Leishmania donovani, Trypanosoma cruzi and T. brucei complex. Apicomplexa – Haemosporina – Malarial Plasmodium, Ciliates – Balantidium coli.	15
V	Helminthology	Helminthology – Cestodes – Taenia solium, Taenia saginata. Trematodes – Schistosoma haematobium, Faciola hepatica, Faciola buski. Nematodes – Trichuris trichura, Intestinal nematode-Enterobius vermicularis, Ascaris lumbricoides.	Filarial nematode - Wucheriria bancrofti. Extra intestinal nematodes - Trichinella spiralis.	15

Marks: 100 4 1 0 5

Course Objectives

The course contents are designed to understand the basic information about the fungi, viruses and their associated diseases based on the signs and symptoms.

Course Outcome

At the end of the course, learners will be able to:

CO1. To understand the basic aspects of fungi with its taxonomy, various fungal

databases, know about fungal immunity and the methods used in the specimen

collections.

CO2. Know about the different classes of antifungals, their mode of action, methods

followed in diagnosis of fungal infections and its treatment.

CO3. Know about the different types of fungal infections, properties of the fungi

causing these infections, the diagnostics methods and the treatment of these

infections.

CO4. To know the basic concepts of viruses with its taxonomy, multiplication and the

different types of animal viruses and its classification.

CO5. To understand the disease causing nature of different class of animal viruses,

new emerging viral diseases, its pathogenesis and treatment methods.

Syllabus

Syllab		T . 1 1 T	<u> </u>	
Unit	Unit Title	Intended Learning C	Hours of	
		(K1, K2)	(K3, K4, K5)	Instruction
I	Medical Mycology	Introduction-Historical Perspectives and Miles stones in Mycology, Fungal Taxonomy- Binomial nomenclature, fungal repository and databases, Classification of medically important fungi, Immunity to fungal diseases- cellular and humoral Immunity. Collection and Transport of fungal specimens.		15
II	Antifungal therapy	Historical Perspectives and Current scenario, Classification of Antifungals- Polyene, Synthetic and Miscellaneous antifungals,	Antifungal Susceptibility testing-CLSI guidelines, Diagnosis of Fungal infections- Conventional and non- conventional methods, Current techniques in fungal diagnosis.	15
III	Mycosis	Superficial mycosis - Tinea, Piedra, Cutaneous mycosis - Dermatophytosis. Subcutaneous mycosis - Sporotrichosis, Mycetoma, Systemic mycosis-Blastomycosis and Histoplasmosis. Opportunistic mycosis - Candidiasis, Aspergillosis and Mucoromycosis, Miscelleneous mycosis - oculomycosis, Emerging fungal diaseases.		15

IV	Virology	Discovery, nomenclature and classification of virus. Life cycle of Bacteriophage - Lytic and Lysogenic cycles. Definitions - Lysogen, Prophage, Temperate phage, Viroids, Virusoids, Satellite RNAs, Prions. Morphology and distinctive properties of phages - T4, Lambda, M13 and PI. Animal viruses. Grouping of animal viruses based on Baltimore system of classification	Bacteriophage typing and its applications. Comparison of multiplication of bacteriophages	15
V	Clinical virology	Epidemiology, life cycle, pathogenicity, diagnosis, prevention and treatment of human viral infections caused by animal viruses - Pox virus, Parvo virus, Reo virus, Retro virus, Hepadna virus. Zoonotic viral infections - Rabbies, Yellow fever, Pappataci fever. Newly emerging viral diseases in Asia - SARS, Swine Flu, Hepatitis-C, Dengue fever, Chicken kunya, Zika virus, Nipah virus.	Cultivation of viruses.	15

CORE VI - BIORESOURCE TECHNOLOGY

Course Code: 18MBC06 Hours: L + T + P = C

Marks: 100 4 1 0 5

Course Objectives

The aim of Bioresource Technology course is to know current bio-resources and their exploitations on the production of microbial products. The content of the precise course include nature of the bio-resources, industrially important microorganisms, up and down stream process, functions of the fermentors, primary and secondary metabolites and production of recombinant products. It also covers production of steroids, sterols and non-steroid compounds through microbial transformations.

Course Outcome

- 1. By the end of the course, the students will be able to know about the nature and current status of the bio-resources.
- 2. The students will clearly get in-depth information about utilization of natural resources on the production of microbial products like enzymes, organic acids, antibiotic, vitamins, alcoholic beverages, steroid and non-steroid components.
- 3. The course will provide in-depth theoretical knowledge on exploitation of natural resources.
- 4. The course will also provide meticulous ideas on different types of fermentors and their functions.
- 5. After the study, the course contents will give several opportunities for the students to develop bio-entrepreneur for the production of microbial products by utilizing natural wastes.

Unit	Unit Title	Intended	Hours of Instruction						
		(K1, K2)	(K1, K2) (K3, K4 & K5)						
I	Introduction to	Introduction -	Biological waste	15					

	Bioresource	Biomass, Biological wastes from domestic, agriculture and industries.	treatment, Bioenergy – Biofuels-Production of Biofuels, Acetone- butanol production, Biotransformations and bioresource systems analysis. Bioproducts: Biocatalysis and fermentations.	
II	Bioprocess technology	Fermentation process - The range of fermentation process - Chronological development - Component parts of a fermentation process - Fermentation economics. Industrially important microorganisms - Isolation, preservation and improvement of strains - Handling, media for industrial fermentation - Formulation and sterilization,	Development of inoculum for various upstream process.	15
III	Fermentor types and design	Parts of a fermentor, body construction, heat production - gas liquid exchange - mass transfer - heat transfer - oxygen transfer - stirring and	fermentation technology. Fermentation types –	15

		mixing. Scale up and scale down fermentation process. Control of temperature, pH, form pressure		
IV	Downstream processing	Recovery of intracellular and extra cellular products - Biomass separation by centrifugation, filtration, chemical and Electro flocculation. Cell disintegration - physical, chemical and enzymatic methods. Extraction - solvent, two phase, liquid extraction, whole broth, aqueous multiphase extraction. Purification by different methods, Concentration by precipitation, ultrafiltration, reverse osmosis. Drying and crystallization.		15
V	Microbial Products		Organic acids - Amino acids, Antibiotics, Enzymes, Vitamins, Alcoholic beverages - wine and beer,	15

PRACTICAL - III

PRACTICAL EXAM: 7 HRS / DAY: 2 CONSECUTIVE DAYS

CORE PRACTICAL - III: MEDICAL MICROBIOLOGY (18MBCP03)

Course Objectives

The course contents are designed to gain adequate hand on knowledge and acquire adequate skill to identifybacteria, fungi and parasites from clinical samples, cultivate viruses in embryonated eggs and identify the various pathogenic bacteria, fungi and parasites based on morphology, cultural and biochemical characteristics.

Course Outcome

At the end of the course, learners will be able to:

- 1. Gain knowledge on identification of bacteria and parasites from clinical specimens.
- 2. Analyze the clinical specimensandunderstand the different methods to cultivate fungi.
- 3. Understand the methods to collect and transport of clinical specimens.
- 4. Gain knowledge on examination of parasites from clinical specimens.
- 5. Understand the various methods to cultivate viruses

List of Experiments

- 1. Collection and transport of clinical specimens for microbiological examinations.
- 2. Cultivation of Microbes-Basal, Differential and Selective media.
- 3. Isolation and identification of bacterial pathogens from clinical specimens viz. Throat swab, pus, urine, sputum and stool.
- 4. Antimicrobial sensitivity testing by disc-diffusion technique and determination of MIC.
- 5. Examination of parasites in clinical specimens- Floatation and sedimentation techniques of stool examination.
- 6. Blood smear examination for malarial parasites.
- 7. Cultivation and Identification of fungi by Lactophenol cotton blue (LPCB) mount of *Mucor*, *Rhizopus*, *Aspergillus*, *Penicillium*, *Fusarium*, *Curvularia*, *Bipolaris*&*Trichophyton*).
- 8. Identification of Non sporulating fungi- Slide culture method, Cornmeal/Tapwater agar.
- 9. Identification of *Candida* species- Germ tube method, Sugar assimilation/ fermentation test, species differentiation on Hichrome agar.
- 10. Isolation and characterization of bacteriophage from natural sources.
- 11. Animal tissue culture Egg inoculation methods of virus.
- 12. Spotters of viral inclusions.

PRACTICAL - IV

PRACTICAL EXAM: 7 HRS / DAY: 2 CONSECUTIVE DAYS

CORE PRACTICAL - III: INDUSTRIAL MICROBIOLOGY

Course Code: 18MBCP04 Hours: L + T + P = C

Marks: 100 0 0 5 4

Course Objectives

The aim of this course is to know various methods adopting to isolate, screen the industrially important microorganism and apply for the production of microbial products like enzyme, antibiotic, alcohol and biosurfactants. It also covers purification and characterization of the products by appropriate methods.

Course Outcome

1. By the end of the course, the students will able to know about the techniques to isolate and screen the significant microorganisms capable to produce products.

- 2. The course will provide meticulous ideas for the production of ethanol from natural and industrial wastes.
- 3. The course will also provide in-depth knowledge and ideas for the production of biosurfactant and its characterization.
- 4. From this course, the students will get an idea to isolate and characterize the microbial products for further applications.
- 5. After the study, the course contents will give several opportunities for the students to develop bio-entrepreneur for the production of microbial products by utilizing natural wastes.

Unit	Unit Title	Intended	Learning Chapters	Hours of
		(K1, K2)	(K3, K4 & K5)	Instruction
I	Isolation and screening of antibiotic producing microbes	Screening of antibiotic producing microorganis ms from soil.	-	15
II	Enzyme and its production	 Screening of enzyme producing organisms (e.g. Amylase and Cellulase). Production of industrially important enzymes by Submerged fermentation (Any one enzyme). Production of industrially important enzymes by Submerged fermentation (Any one enzyme). Production of industrially important enzymes by solid state fermentation (Any one enzyme). Assay of extracellular enzymes 	Purification of enzymes by filtration method/chemical method by ammonium sulphate.	15

		produced by bacteria: a) Amylase, b) Protease and c) Lipase.		
III	Alcoholic fermentation	 Production of wine. Production of alcohol from agricultural wastes (sugarcane molasses and beetroot). Biofuel Production-Alcohol & Hydrogen 	Characterization of alcohol: Nutritive value, Colour, Haze, Viscosity, foam Characteristics, gurting flavor	15
IV	Production of organic acid and metabolites	 Microbial production of citric acid by using Aspergillus. Production of extracellular metabolites from actinomycetes 	 Production and extraction of biosurfactant. Quantification and characterization of biosurfactant. Synthesis and separation of bioactive compounds - TLC or Column Chromatography. Immobilization of cells and enzymes. 	15
V	Antibiotic sensitivity test	a) Kirby Bauer's method and b) MIC determination by filter paper assay and broth dilution assay.	-	15

CORE - VII: MOLECULAR BIOLOGY AND APPLIED BIOTECHNOLOGY

Course Code: 18MBC07 Hours: L + T + P = C

Marks: 100 4 1 0 5

Course Objectives

Content of the curriculum is constructed to import the knowledge on structure of gene, genome organization and functions of genetic materials. Special focus on transcription, translation, mutation, DNA repair, protein synthesis and translation modification process in microbial system is given. Sufficient space is provided to understand various tools like cloning and

expression of foreign genes in the bacterial system and apply them in various applications.

Outcome of the course

Learners are enabled to learn following at the end of the course:

- 1. Structure of gene, genome organization and functions of genetic materials.
- 2. Transcription, translation, mutation, DNA repair and protein synthesis and translation modification process
- 3. Cloning and expression of foreign genes
- 4. Students will be able to produce genetically modified organisms.

Unit	Unit Title	Intended Learn	ning Chapters	Hours of
		(K1, K2)	(K3, K4 & K5)	Instruction
I	Basics of Molecular Biology	Structure, types and functions of DNA, RNA and peptide nucleic acid (PNA), Replication methods: Requirement for DNA replications and post replication event. Inhibition of DNA replication	Gene transfer in bacteria transformation conjugation transduction	15
II	Transcription	Types and functions of RNA polymerases, Various factors involved in transcription process - Initiation, elongation and termination	Regulatory elements of transcription. Inhibitors of Transcription. Operon models - lac, trp, ara operons	15
III	Protein synthesis	Steps in translation process - Details of initiation, elongation and termination. Post translation modifications	Inhibitors of Protein synthesis. Elucidation of genetic code - Wobble hypothesis.	15
IV	Principles of recombinant DNA technology	Principles of recombinant DNA technology. Gene cloning in bacteria, Construction of genomic and cDNA libraries, Transposons. Screening of recombinants - Phenotypic expression of characters	Hybridization techniques. DNA sequencing methods - strategies for genome sequencing.	15

V	Applications of recombinant DNA technology	Applications of recombinant DNA technology – enzymes, vectors, plasmids and cosmids, and Bacmids. Production of recombinant products like insulin, interferon, tissue plasminogen activator, subunit vaccines.	Genetically modified organisms (GMO's). Gene silencing - Gene knockouts and gene therapies, antisense technologies. Genetic engineering of plants for viruses, herbicide tolerance.	15

CORE - VIII: BIONANOTECHNOLOGY AND INFECTOMICS (18MBC08)

Course Code: 18MBC08 Hours: L + T + P = C

Marks: 100 4 1 0 5

Course Objective

The objective of this course is to provide an insight into the fundamentals

of Nanoscience and Nanotechnology. Further this course also deals with the understanding between pathogens and their hosts.

Course Outcome

- 1. To acquire the knowledge of basic science required to understand the fundamentals of nanoscience
- 2. To get familiarize with the basic concepts characterization of nanoparticles.
- 3. To realize the biomedical applications of nanoscience
- 4. To obtain a sound understanding in genomics and proteomics
- 5. To understand the high throughput omic approaches

Unit	Unit Title	Intended Lear	ning Chapters	Hours of

CORE - IX: FOOD, SOIL AND ENVIRONMENTAL MICROBIOLOGY

Course Code: 18MBC09 Hours: L + T + P = C

Marks: 100 4 1 0 5

Course Objectives

This course aims to communicate the students with basic principles of microbiology and their applications to soil, food, dairy and environment. It also prepares the student to address pressing environmental challenges by developing a fundamental understanding of the microbial communities and processes in natural and built environments. It lays and builds upon the foundation of basic microbiology, microbial energetics and diversity to applying the tools provided by microbiology ranging from traditional to state of art for addressing relevant environmental concerns. It provides an in depth exploration of the diverse role of microbes and microbial communities in each sector.

Course Outcome

1. By the end of the course, the students will be able to know about the significance of the microbes in soil, food, dairy and environment.

- 2. The students will clearly get in-depth information about the harmful effects and beneficial role of microbes in each sector.
- 3. This course provides in depth knowledge on water and waste water treatment to tackle the current environmental problems.
- 4. The course will also provide meticulous thoughts on the task of microbes in waste water treatment and solid waste management.
- 5. After the study, the course contents will give several opportunities for the students to develop as a researcher in food, dairy, agriculture and conservation sectors.

Unit	Unit Title	Intended L	Hours of	
		(K1, K2)	(K3, K4 & K5)	Instruction
I	Food microbiology	Food as a substrate for microorganisms. Sources of contamination of microorganisms in foods, Factors influencing microbial growth in foods. Food borne diseases. Spoilage of fruits, vegetables, meat, poultry, fish and seafoods. Methods of food preservation: Traditional, physical and chemical methods.	Applications of food microbiology: Beneficial uses of microorganisms in food, Intestinal beneficial bacteria, Probiotics, Prebiotics – Definition, functional foods, types, importance and economic values, Recombinant foods, Biosensors in food industry.	15
II	Dairy microbiology	Microflora of milk and milk products, Fermented milk and milk products:	and milk products. Sanitation of dairy	15

		Sauerkraut, Buttermilk, Cream, Yogurt, Cheese, Kafir and kumiss. Microbes involved in fermentation: Starter lactic acid cultures. Spoilage of milk and milk products, Milk borne diseases, Milk quality testing.	their regulations.	
III	Soil microbiology	Distribution of microorganisms in soil, Factors influencing the soil microflora	Biogeochemical cycles: Carbon, Nitrogen, Phosphorus and Sulfur, Interactions among microorganisms: Mutualism, commensalism, ammensalism, synergism, parasitism, predation and competition. Interaction of microbes with plants: Rhizosphere, phyllosphere, mycorrhizae. Nitrogen fixation: Symbiotic and asymbiotic. Soil reclamation.	15
IV	Microbiology of air and water	Composition of air, Number and types of microorganisms in air, Distribution and sources of air borne organisms, Aerosol, Airborne	Extremophiles – Thermophiles, mesophiles, psychrophiles, Deep sea, Desert, Acidophilic, Alkalophilic and	15

		diseases,	Halophilic	
		Assessment of	microorganisms.

PRACTICAL - V

PRACTICAL EXAM: 7 HRS / DAY: 2 CONSECUTIVE DAYS

CORE PRACTICAL - V: MOLECULAR BIOLOGY AND BIOTECHNOLOGY (18MBCP06)

Course Objectives

The contents for above practicals are designed to impart hand on experimental knowledge on the various techniques in molecular biology and biotechnological experiments. This would enable them to design experiment for the production of recombinant products using above molecular techniques.

Coarse Outcome

At the end of the course, learners will be able to

- 1. Isolate plasmid, chromosomal DNA from the bacteria.
- 2. Became skillful in the inserting foreign DNA in to various vectors and transform.
- 3. Express foreign DNA in *E.coli* and other system.
- 4. Evaluate the presence of recombinant DNA in the different host used in the cloing
- 5. Isolate mutants from normal organisms.

List of Experiments

- 1. Isolation and quantification of DNA and RNA
- 2. Isolation of plasmid DNA from bacteria
- 3. Restriction digestion of plasmid
- 4. Determination of molecular weight of DNA
- 5. Cloning of fragment in plasmid
- 6. Preparation of competent *E.coli* cells
- 7. Transformation of plasmid DNA to the E.coli cells
- 8. Screening for transformants Blue white selection
- 9. PCR amplification of DNA fragment
- 10. Screening for recombinant proteins by SDS PAGE
- 11. Screening by TLC
- 12.Isolation of auxotrophic mutants

13. Isolation of antibiotic resistant bacteria.

PRACTICAL - VI: APPLIED MICROBIOLOGY

Course Code: 18MBCP06 Hours: L + T + P = C

0 0 5 4

Marks: 100

Course Objectives

This course is designed to prepare the students for sensible knowledge in a wide range of profession. This paper provides the scientific discipline that deals with the application of microorganisms and the knowledge about them. Applications include microbial biotechnology, agriculture, food microbiology and bioremediation. It also covers significant experiments linked with soil, food, dairy and environment.

Course Outcome

CO1. By the end of the course, the students will able to know about the techniques

to isolate and assess the harmful microorganisms in food, milk and milk products.

CO2. The course will also provide meticulous ideas for the enumeration of air and

water borne microorganisms.

- CO3. From this course, the students will get an idea to isolate and characterize the
 - microbes in extreme environmental conditions.
- CO4. After the study, the course contents will give several practical knowledge Opportunities for the students.

Syllabus

Unit	Unit Title	Intended L	Hours of	
		K1, K2	K3, K4, K5, K6	Instruction
I	Dairy Microbiology Soil Microbiology	Isolation of yeast and molds from spoiled nuts, fruits and vegetables. Isolation of phosphate solubilizers from fertile soil.	Detection of number of bacteria in milk by breed count. Determination of quality of milk sample by methylene blue reductase test and resazurin method. Detection of number of bacteria in milk	15 15
III IV	Plant Pathogens Water Microbiology	Isolation of nitrogen fixers (a) Rhizobium from root nodule and (b) Azotobacter from rhizosphere. Evaluation of root nodule by cross section of legume roots.	by standard plate count. Bacteriological examination of specific food (a) Curd (b) Raw meat (c) Fish (d) Ice cream. Isolation and enumeration of soil microorganisms (bacteria, fungi and actinomycetes). Screening of antagonistic bacteria in soil by	15 15
V	Environmental Microbiology	Isolation of plant pathogens - Study of the following diseases: Tobacco mosaic, Bacterial blight of paddy, Red	agar block overlay method. Physical, chemical and microbial assessment of water and potability test for water. Colour, pH, alkalinity, acidity, COD, BOD, TS, TDS and TSS. Microbiological	15

root of assessment -MPN sugarcane, index presumptive, confirmatory Citrus cancer, completed tests. Downy Quantification of mildew of microorganisms in bajra, air: Open plate, Powdery liquid impingement mildow of techniques and cucurbits, through air sampler. Head smut of sorghum, Leaf rust of coffee, Leaf spot of mulberry, Root knot of mulberry. Isolation of dye degrading microbes from soil samples. Screening of nitrate reducers using aqueous potassium nitrate broth. Bacterial reduction of nitrate from ground waters. Bacterial reduction of hexavalent chromium in aqueous medium.

RESEARCH METHODOLOGY AND COMPUTATIONAL BIOLOGY

Course Code: 18MBC10 Hours: L + T + P = C

Marks: 100 4 1 0 5

Course Objectives

The coarse contents are designed to gain a general insight in to the research aspects of microbiology with a basic understanding in to the handling and working of instruments; use of biostatics tools in research and application of bioinformatics to problem solving in real research problems

Coarse Outcome

At the end of the course, learners will be able to

CO1. Know the basic aspects of research to frame a research problem, analyze the

various methods used in research and to write a research report.

- CO2. Know the various measurements used in calculations of buffers and understand the basic instruments used in laboratory.
- CO3. Learn the principles, working and uses of sophisticated instruments and their usage in research.
- CO4. Know the various biostatical formula used in the interpretation of experimental data to analyze the results statistically.
- CO5. Learn and apply the various bioinformatics tools to perform sequence-based

searches, and analyze the results using bioinformatics software's.

ELECTIVE COURSES

ELECTIVE PAPER - 1: BIOCONTROL AND ENTOMOLOGY (18MBCE01)

Course Objectives

The aim of Biocontrol and Entomology course is to introduce necessary and application relevance of biofertilizers and biocontrol agents for the students who are in more attentiveness in the development of sustainable agriculture. The content of rigorous course includes significance of microbial lbiofertilizers namely, bacteria, fungi, cyanobacteria and actinorhiza. It also covers various methods applications of biocontrol agents and biomanures for the current agriculture.

- 1. By the end of the course, the students will be able to know about the importance and applications of the biofertilizers for the sustainable agriculture.
- 2. The students will clearly learn in-depth knowledge in order to foster biofertilizers to overcome the applications of chemical fertilizers in the modern farming's.
- 3. The course will also provide opportunities for the students to develop bioentrepreneur for the production of bioferilizers.
- 4. The students will clearly get in-depth information about exploitation of natural wastes by producing bioorganic fertilizers.
- 5. The students will gain meticulous ideas on production of biopesticides as biocontrol agents

Unit	Unit Title	Intended 1	Hours of	
		(K1, K2)	(K3, K4 & K5)	Instruction
I	Current status of fertilizer and biofertilizers	History, importance and present status of different types of fertilizers and their application to crop plants. Importance of macro and micro nutrients - Nutritional deficiency in plants. Biological fixation of nitrogen.	Gloeocapsa and Scytonema. Symbiotic association with Azolla, Lichens, Bryophytes and Higher plants. Bacterial biofertilizers: Free living forms - Azatobacter, Azospirillum. Symbiotic forms: Rhizobium-Legume association.	15

II	Fungal and actinobacterial Biofertilizers	-	Fungal biofertilizers: Types of fungal biofertilizers - Ecto, endo and ect-endomycorrhiza, Ectomycorrhizal association with pines, Arbuscularmycorrizal association (AM) Glomusspp.,Nutrient uptake and exchange.Isolation and field enrichment of mycorrhiza. Actinomycetes as biofertilizers: History and biology of actinorhiza, Actinorhizal associations in higher plants, Frankia spp.	15
III	Biomanure and its applications	Biomanures technology: A general account of manures - Moulds, Composts Farm yard manure, Oil seed cakes - Castor and neem, Green leaf manures - Gyricidia, Sesbania and Crotalaria, Agro- industrial wastes - Poultry manure and saw-dust, Vermi Compost, Microbial compost - pure culture and consortium as an inoculums.	manures - A combination of biofertilizer and manure applications with	15
IV	Introduction to	History,	Role of insect	15

	biocontrol	principles and scope of biological control. Important groups of parasitoids, predators and pathogens. Principles of classical biological controlimportation, augmentation and conservation. Biology, adaptation, host seeking behaviour of predatory and parasitic groups of insects.	Entomopathogenic nematodes, viruses, bacteria, fungi and protozoa in biocontrol and their mode of action.	
V	Biocontrol agents	Definition and importance of biological pests and biopesticides in agriculture.	Brief conception of Integrated Pest Management (IPM), Integrated Pest and Disease Management (IDPM). Biopesticides - Advantages of biopesticides over chemical pesticides, Types of biopesticides, Bacillus thuringiensis and its importance. Mass production of quality biocontrol agents - techniques, formulations, economics, field release/application and evaluation.	15

ELECTIVE PAPER - 2: ENTREPRENEURSHIP IN MICROBIOLOGY (18MBCE02) Course Objectives

Entrepreneurship in Microbiology course is to make the student understand the importance of entrepreneurship. It is also designed to make the students develop new products and processes from microbes. The course is intended to train the students in market analysis, financial management, process development and other skills required to become a successful entrepreneur.

- 1. The students will be able to know about the importance, need of entrepreneurship for socio-economic gains
- 2. The students will gain knowledge on the schemes of the government and will be able to understand the ways of fund generation
- 3. The course will also provide opportunities for the students to develop the necessary skills to become a successful entrepreneur
- 4. The students will understand the importance of process development for successful entrepreneurship.
- 5. The students will gain skills for developing commercial products from microbes.

Un	Unit Title	Intended Lea	rning Chapters	Hours of
it		(K1, K2)	(K3, K4 & K5)	Instructi on
I	Introduction to Entrepreneurshi p	Evolution of the concept of entrepreneur - Entrepreneurship: Definitions - concept of Entrepreneurship, development - need - role of resource, talent and spirit - process of Entrepreneurship to socio-economic gains.		12
II	Schemes and Support	Institutions and schemes of government of India - Schemes and programmes,		12

		Department of science and technology schemes, Nationalized banks - other financial institutions etc - SIDBI - NSIC - NABARD - IDBI - IFCI - ICICI etc.		
III	Entrepreneurial Skills		Skills for entrepreneurs - communication skills, problem solving skills. Business plan development. Market need - market research, SWOT analysis, identify your competition. Financial plan - obtain financing for your business, insure your business, insure your business, Marketing - mix - product, distribution, price, promotion, and set marketing goals.	12
IV	Successful entrepreneur	Successful entrepreneur - Steps, Characteristics. Entrepreneurship opportunities	Composting from domestic waste, agricultural and industrial waste. Vermicomposting - SCP production - Mushroom cultivation	12
V	Products & Processes		Biofertilizers and biopesticides. Production of teaching kits (plasmid DNA isolation, serum electrophoresis) and diagnostic kits (WIDAL test kits, ABO blood grouping kits)	12

ELECTIVE PAPER - 3: ALGAL BIOTECHNOLOGY (18MBCE03)

Course Objectives

Algal Biotechnology course is to make the student understand the potential of algae and its applications in various fields. The course intends a thorough understanding of the classification and cultivation of algae. The students will also be able to understand the biotechnological potentials of algae at the end of the course.

- 1. The students will be able gain knowledge in the structure, classification and characteristics of algae
- 2. The students will gain knowledge on various cultivation methods adopted for algae
- 3. The course will also give insights on optimization of culture methods for effective production of algal products
- 4. The course will train the students for developing new commercial products from algae

Un	Unit Title	Intended Lea	rning Chapters	Hours of
it		(K1, K2)	(K3, K4 & K5)	Instructi on
I	Structure & Classification	Classification, structure, reproduction and other characteristics of algal divisions, Distribution of algae, Characteristics of- blue green algae, dinoflagellates, Microalgae, thallus organization. Characteristics of various micro and macro algal morphology, Salient features of Protochlorophyta, Chlorophyta, Charophyta, Xanthophyta,		12

		Bacillariophyta, Phaeophyta and Rhodophyta. Algal blooms		
II	Cultivation of algae	Algal production systems: Isolation method, Screening methods, Plating methods, Strain selection, Algal growth curve, Culture media, Measurement of algal growth. Nutritional requirements, reproduction, evaporation and uniform dispersal of nutrients, Harvesting of algae, drying methods		12
III	Estimation studies	Lipid, protein, carbohydrates, chlorophyll, biomass, medium selection, optimization of medium, pH, temperature, light sources, CO ₂ supplements. Types of bioreactors. Extraction methods - lipid, pigments, Carbohydrate.		12
IV	Commercial utility of algae		Algae as a source of food and pigments. Role of algae in agriculture - Bluegreen algal biofertilizer: Method of	12

		preparation, application and its advantages over inorganic fertilizers bio-fertilizers. Liquid seaweed fertilizer: Method of preparation and application, algae for pollution control and other novel applications	
V	Biotechnological approaches	Biotechnological approaches for production of important algae, pigments, biofuels, hydrogen production, important bioactive molecule. Aqua, cattle feed and bio-fertilizer conversion methods. Biodiesel separation and conversion methods, Transesterfication methods

ELECTIVE PAPER - 4: QUALITY CONTROL IN INDUSTRIES (18MBCE04) Course Objectives

The main objective of this course is to make the learner a potential candidate for Quality control and Quality assurance in pharmaceutical, food and other biotechnology industries.

- 1. The students will be able to understand the importance of GLP and GMP in biotechnology industries
- 2. The students will gain knowledge on the production of sterile medicinal products in pharmaceutical industries
- 3. The course will equip the students on the various methods of quality control and quality assurance that are followed in pharmaceutical industries.
- 4. The course will train the students in quality control and quality audits in bio industries

Un	Unit Title	Intended Lear	rning Chapters	Hours of
it		(K1, K2)	(K3, K4 & K5)	Instructi on
I	Introduction to GLP & Biosafety	Introduction to laboratory safety: Good Laboratory Practice (GLP), Personal hygiene practice, regulatory agencies, safety of working lab, emergency response. Handling of hazardous materials, Operational qualification and performance Qualification of facilities. Applications of computers in quality control laboratory		12

II	Quality control in food industries	Quality of raw materials, finished product Release: Food quality evaluation - nutritional, functional, microbial, shelf life and physicochemical analysis. Rapid test for food quality and safety, Quality review, Quality audits, Batch release, Document warehousing - Good ware housing practices materials management	12
III	Quality control in pharmaceutical industries	Qualitative and quantitative analysis of tablets, capsules, ointments, suppositories, creams, modified release products (controlled release, sustained release products and etc), parenteral, ophthalmic and surgical products. WHO guidelines for impurity and related substances in the drugs. Quality management in the pharmaceutical industry	12
IV	Quality control in clinical laboratories	Role of laboratory in human health and diseases, Designing of laboratory sections, Anticipating demand and ensuring availability of adequate medical and diagnostic supplies (Contents of all diagnostic and	12

			medical kits), Internal and external quality control programmes. Universal safety precautions	
V	Laboratory a industrial calculations	Abbreviations and terms used in the industries, The international system of units, Unit conversion between SI and US, common laboratory calculations - Units of measures (Mole, equivalents and normality) dilutions and percentages; Volume calculations. Using Microsoft Excel's graphing utility		12

ELECTIVE PAPER – 5: INTELLECTUAL PROPERTY RIGHTS (IPR), BIO-SAFETY AND BIOETHICS (18MBCE05)

Course Objectives

This part of the curriculum helps students to have an ability to understand and conduct research to meet desired needs within the legal, social, ethical, safety & sustainability aspects in biology and the biocontainment.

- Students can know rules on how to protect patents, copyrights, trademarks, and other forms of IPRs have become a standard component of international trade agreements.
- Students may become patent attorney, who has the specialized qualifications necessary for representing clients in obtaining patents and acting in all matters
- Gain knowledge in procedures relating to patent law and practice, such as filing an opposition.
- To understand the importance of biosafety and to expose them to various biosafety committees and its importance
- To inculcate the ethical implications in hospitals, clinical laboratories and research.

Un	Unit Title	Intended Lea	rning Chapters	Hours of
it		(K1, K2)	(K3, K4 & K5)	Instructi on
I	Introduction to Intellectual Property	IPR - Definition - Types of IP: Patents, Trademarks, Copyright & Related Rights, Industrial Design, Traditional Knowledge, Plant varieties, Trade Secrets, Geographical Indications, IP as a factor in R&D IPs of relevance to Microbiology / Biotechnology and few Case		12

		Studies.WTO - Definition - Functions - Forms of IPR Protection.		
II	Agreements and Treaties	History of GATT & TRIPS Agreement; Madrid Agreement; Hague Agreement; WIPO Treaties; Budapest Treaty; PCT; Indian Patent Act 1970 & recent amendments. Paris Convention.		12
III	Basics of Patents and Concept of Prior Art		Types of patent applications: Ordinary, Patent Cooperation treaty (PCT), Conventional, Divisional and Patent of Addition; Specifications: Provisional and complete; Forms and fees Invention in context of "prior art"; Patent databases; Searching International patent Databases; Countrywise patent searches (USPTO, esp@cenet (EPO), Patents scope (WIPO), IPO, EPO, etc.).National & Patent Cooperation	12

			treaty(PCT) filing procedure; Time frame and cost; Status of the patent applications filed; Revocation of patent, Precautions while patenting – disclosure/non-disclosure; Financial assistance for patenting – introduction to existing schemes Patent licensing and agreement Patent infringementmeaning, scope, litigation, case studies – Neem, Turmeric and Pasmati rice , Commercialization and Licensing.	
IV	Biosafety	Introduction: Historical Background; Introduction to Biological Safety Cabinets; Primary Containment for Biohazards; Biosafety Levels; Biosafety Levels of Specific Microorganisms; Biosafety guidelines and regulations (International); Biosafety guidelines – National; Definition of	Institutional Biosafety Committee, RCGM, GEAC etc. for GMO applications in food and agriculture; Environmental release of GMOs; Risk Analysis; Risk Assessment; Risk management and communication; Biosafety in relation to transgenic research and applications. Biopiracy	12

		GMOs & LMOs;		
V	Bioethics	Definition - Ethical implications of cloning: Reproductive cloning, therapeutic cloning	Ethical, legal and socioeconomic aspects of gene therapy, germ line, somatic, embryonic and adult stem cell research. Animal ethics - Norms in India - Licensing of animal house - Ethical clearance norms for conducting studies on human subjects. Ethical implications of human genome project. Bioethics committees - IAEC, CPCSEA, OECD, etc.	12

SUPPORTIVE COURSES

SUPPORTIVE-I: MEDICAL LABORATORY TECHNOLOGY (18MBCS01)

Course Objectives

The course contents are designed to gain a general insight in to the basic aspects of medical laboratory, measurements, equipment's used, the various microbiological and biochemical procedures and the safety aspects in a Medical laboratory.

Course Outcome

At the end of the course, learners will be able to:

- 1. Learn the handling of instruments and various measurements used in the laboratory.
- 2. Learn about the basics of laboratory techniques its significance in diagnostic evaluation.
- 3. Identify and differentiate the different types of bacteria and fungi in clinical samples.
- 4. Learn the differential diagnosis by the help of different serological techniques.
- 5. Learn the various methods used in Sterilization.

Unit	Unit Title	Intended Lea	rning Chapters	Hours of
		(K1, K2)	(K3, K4 & K5)	Instruction
I	General Laboratory Techniques and procedures	Chemicals and related substance, concept of solute and solvent, buffer solutions and their actions, safety measures in a Laboratory. Cleaning of glassware's. Laboratory instruments - Balance - Centrifuge - Ovens - Water Bath - Incubator - Laminar Airflow-Calorimeter-Working and applications.		12
II	GLP	Medical laboratory		12

		rules, ethics and professional code of conduct: Rules of medical laboratory - Medical laboratory request form - Maintenance of laboratory records - Delivery of laboratory results. General precautions for avoidance of laboratory accidents. Biomedical wastes - Introduction, categories of waste, standard protocol of waste disposal		
III	Collection, Transport & processing of specimen	waste disposal	Methods of Collection, transport and processing of clinical specimens - Blood, Urine, Sputum, CSF, Pus &Faeces for microbiological examination. Types of media- Semi synthetic, Synthetic, Enriched, Selective and Differential media. Staining techniques-Simple and differential- Gram's. Lactophenolcotton blue (LPCB).	12
IV	Hematology	Introduction to hematology, collection of blood sample and anticoagulants, Specimen collection and processing in hematology	Haemocytometer and procedure for RBC,WBC, ESR count, haemoglobin estimation, bleeding time, whole blood coagulation time, platelet count, normal	12

		values a interpretation	nd
V	Biochemical analysis	Urine analysical, chemic microscopic, routi test viz., sug albumin a phosphates, other test bile salt, bile pigme urobilin ketone bodi chyle, specific gravitotal protein	al, ne ar, nd sts nt, es,

SUPPORTIVE - II: MICROBIOLOGY (18MBCS02)

Course Objectives

The course contents are designed to gain knowledge about the different forms of bacteria, fungi, algae, protozoan's along with the basic principles of microbial taxonomy. The learner will understand about the microbial metabolism and microbes that are of commercial importance.

Course Outcome

At the end of the course, the learner will be able to

- 1. Know about the basic aspects of microbiology, different methods of isolation of microorganism, preservation and controlling of microorganism.
- 2. Know about the basic aspects of microbial taxonomy, classification systems and the life cycle of important class of microorganisms.
- 3. Know the basis of microbial physiology with its biochemical pathway and the ecology of the microbes with reference to Extreme Ecosystems.
- **4.** Know the commercial importance of microorganisms.

Un	Unit Title	Intended Lear	rning Chapters	Hours of
it		(K1, K2)	(K3, K4 & K5)	Instructi on
I	History and discovery of microorganisms	Microscopical appearance and Staining techniques Colony characteristics of different bacteria. Microbial cellular morphology : Cellular structures - Capsule, Cell, Periplasmic space, Spores, Flagella, Cilia, Pili and other cellular inclusions		12
II	Sterilization and culturing techniques	Types of culture media and their preparation for bacterial cultivation Broth tubes, slants, stabs and plate media. Pure culture		12

		techniques. Anaerobic culturing techniques. Maintenance and preservation techniques		
III	Microbial physiology	Aerobic and anaerobic respiration in microbes. Biochemical test characteristics carbohydrate fermentation, IMVIC tests, starch hydrolysis, cellulose, gelatin, casein, catalase test, oxidase test, urease test, nitrate reduction, TSI and antibiogram		12
IV	Medical microbiology		Epidemiology, pathogenicity, diagnosis and treatments of bacterial diseases - diarrhea, typhoid, cholera, leptospirosis, tuberculosis, Fungal diseases - Athlete's foot, aspergillosis and dermatitis. Parasite diseases - amoebiasis, malaria and taeniasis	12
V	Microbial biotechnology		Microbial metabolites - Production and use of enzymes, organic solvents, single cell proteins, beverages (beer and wine), baker's yeast and milk products. Production of microbes as biofertilizers and biopesticides. Production of	12

genetically engineered	
microbial products

Supportive - III: Health Science Management (18MBCS03)

Course Objective

The objective of this course is to enhance and develop the knowledge on health care system and policies on health care management

Course Outcome

- 1. To acquire the knowledge health policy and policy making process
- 2. To get familiarize with the health care system in India.
- 3. To understand the health care delivery structure in central and state.
- 4. To realize the importance of health care reforms
- 5. To obtain a sound understanding in maintenance of records

Unit	Unit Title	Intended Learning Chapters		Hours of
		(K1, K2)	(K3, K4 & K5)	Instruction
I	Health policy of the government	Public health law - Individual rights vs. public interest - Analyzing Policy Options for Health System Improvement, Health policymaking and the policy process - factors influencing the policy		12
II	Health care system	primary health care institutions, government health scheme, health insurance schemes, private health care system, indigenous systems – Ayureda, Homeopathy and unani		12
III	Health care delivery structure	 central level – union ministry of health and family welfare, state, district, village and block levels; State 		12

		level – ministry of health, state health directorate, district health organisations, Health care system i developing and developed countries		
IV	Reforms in Health care	Introduction, Importance and scope of Health care reform - Health care workforce, Understanding the Major Elements of the Patient Protection and Affordable Care Act		12
V	Skills of health care professionals		Communicati on - Maintaining accurate records - Communicating with others. Professional Development Action Plans - Sharing - Self Evaluation and Peer Evaluation.	12

Supportive - IV: Quality Control in Industries (18MBCS04)

Course Objective

The objective of this course is to enhance knowledge on quality control management in the various industries.

Course Outcome

- 1. To acquire the knowledge quality control in pharmaceutical industry
- 2. To learn the quality control audits in industries.
- 3. To understand the basics of food safety and food quality.
- 4. To realize the microbial quality control in hospitals
- 5. To acquire knowledge on environment monitoring and regulations

Un	Unit Title	Intended Lea	arning Chapters	Hours of
it		(K1, K2)	(K3, K4 & K5)	Instructi on
I	Quality Control in pharmaceutical industry	Basic of pharmaceutical products and their quality control: bulk drugs, forms, vaccines – both chemical and microbiological parameters. Environmental Monitoring – Pharmaceutical industry, Manufacture of Sterile Medicinal Products – British, European, USA-US and Indian pharmacopoeias.		12
II	Industrial quality control and quality audits		Process quality control- sterile and non sterile preparations, Quality control – raw materials, purity check, quality check of finished products,	12

			Industrial responsibilities – social and environmental safety.	
III	Food safety and Food Quality	Microbiological criteria of food, food products, beverages.	Monitoring of factory hygiene and sanitation, Microbiological quality of ingredients, processing and finished products. Food Safety and Standards Authority of India (FSSAI). Food contaminants and diseases	12
IV	Microbial quality control in Hospitals	Control of Healthcare associated infections (HAI) - Culture Identification, Sensitivity pattern, report preparations, HAI surveillance, resistance surveillance	Monitoring water quality in hospital, healthcare infrastructures. Corrective action system, Environmental monitoring and clean room commission	12
V	Microbes and their applications		Quality control in biodegradation and bioremediation. Microbes used in the biofertilizers and biopesticides and biofuels.	12
